Child Development and Education bridges the gap between theory and practice, showing those who teach and care for infants, children, and adolescents how to apply developmental research and theory to everyday practice. More so than any other text, Child Development and Education not only describes developmental phenomena—for infants through late adolescence—but also facilitates observations of and analyses of what children say, do, and create, ensuring that educators can make informed decisions that meet children's and adolescent's needs. New to the fifth edition is a sensitivity to the cultural and bioecological nature of development. New features of the text situate children and adolescents in the contexts of their upbringing and articulate the implications of these experiences for educators and other professionals. Illustrated is the diverse nature of development and how it is influenced by social, environmental, and cultural contexts. Also new to this edition is support for teacher licensure preparation. Teacher candidates are alerted to developmental concepts and theorists they need to know, and are provided practice test questions and case studies to review, demonstrating for them how to prepare for their licensure exam.

This book integrates ideas from many theoretical perspectives into a set of principles and concrete strategies that psychology as a whole can offer you. See for Yourself exercises will help you discover more about yourself as a thinker and learner and also help you come to a deeper and more personal understanding of educational psychology's core ideas. *Recipes for Success* is a unique, user-friendly guide that informs and empowers doctoral students with the skills and knowledge to start and complete their dissertation. Putting together an excellent dissertation is like preparing a gourmet feast for a gathering of distinguished guests who are connoisseurs of fine cooking. You, the researcher, are the chef and chief meal engineer for this eloquent repast. Careful preparation is needed each step of the way, along with a formal means to reach your desired goal. *Recipes* takes you gingerly through these steps. *Recipes* is presented in three phases. In PHASE 1 you start your initial preparation, gather ingredients, and prepare the menu for your feast. This includes your mental, physical, and psychological preparation along with the selection of the type of meal (research topic and method) you will serve. In PHASE 2 you gather your accoutrements and utensils to collect and analyze data to help you solve the problem you pose, answer your research questions, and achieve your purpose. In PHASE 3 you learn how to put your meal (dissertation) together to ensure a delicious high-quality study to serve at your feast. Included are several presentations and web resources to serve as your maitre d' for your banquet. Here is what readers are saying about *Recipes*: Very easy to read! Offers examples and a space to then write your own information. It is broken down into manageable pieces, which makes thinking about your work easier than thinking about the whole dissertation. T.R. (Georgia) Dr. Simon's book is the best resource for dissertations that I have ever seen. It should be titled, *Dissertations for Dummies*, because anyone can follow it. Brenda (New Jersey). I love this book! It is interesting and exciting, and written in a format that I easily understand. It is easy to read, it is concise, and when compared to the other books in my library on dissertation writing, all others pale in comparison. Sharon (Arizona).

This book is a starter 'DIY' text for practitioners who are looking to conduct evaluation studies and research as part of their own professional practice. The growing emphasis on evidence-based practice means that there is an increasing need for practitioners to have at least a basic understanding of research, be aware of methodological pitfalls and to be updated on new methods. This book provides a practical, user-friendly guide to social science research methods for professionals who have benefited from little, if any, formal research methods training but find themselves in a role that requires them to read and understand complex research findings and carry out their own research as part of their professional practice. *Practical Research and Evaluation* is aimed at practitioners working in education, health, social care and community work. Many in this market are non-graduates or are those whose study did not contain a research element, but are required to know how research works. This book has three main aims which will benefit this audience - to enable readers to carry out small-scale research projects of their own, provide them with the basic understanding necessary to commission research, and enable them to better understand and evaluate critically research reports. This book is designed specifically for 'Do-it-Yourself' researchers working in the public or voluntary sectors. It is accessible and relevant to practitioners, uses non-technical language wherever possible and employs grounded examples, practical tips, checklists and readings lists throughout.

The book approaches research from a perspective different from that taken in other educational research textbooks. The goal is to show educators that the application of research principles can make them more effective in their job of promoting learning. The basic point is that we do not have to stop teaching to do research; research is something we can do while teaching and if we do good research, we will do better teaching. This book includes most of the topics treated in traditional educational research books, but in a different order and with a different emphasis. The important content cons.

Research shows that five strategies correlate with the successful completion of a dissertation: Establishing a consistent writing routine Working with a support group Consulting your advisor Understanding your committee's expectations Setting a realistic and timely schedule Building on these insights, this book is for anyone who needs help in preparing for, organizing, planning, scheduling, and writing the longest sustained writing project they have encountered, particularly if he or she is not receiving sufficient guidance about the process, but also for anyone looking to boost his or her writing productivity. The author uncovers much tacit knowledge, provides advice on working with dissertation advisors and committee members, presents proven techniques for the prewriting and writing stages of the dissertation, sets out a system for keeping on schedule, and advocates enlisting peer support. As Peg Boyle Single states, "my goal is quite simple and straightforward: for you to experience greater efficiency and enjoyment while writing. If you experience anxiety, blocking, impatience, perfectionism or procrastination when you write, then this system is for you. I want you to be able to complete your writing so that you can move on with the rest of your life." Few scholars, let alone graduate students, have been taught habits of writing fluency and productivity. The writing skills imparted by this book will not only help the reader through the dissertation writing process, but will serve her or him in whatever career she or he embarks on, given the paramount importance of written communication, especially in the academy. This book presents a system of straightforward and proven techniques that are used by productive writers, and applies them to the dissertation process. In particular, it promotes the concept of writing networks – whether writing partners or groups – to ensure that writing does not become an isolated and tortured process, while not hiding the need for persistence and sustained effort. This book is intended for graduate students and their advisers in the social sciences, the humanities, and professional fields. It can further serve as a textbook for either informal writing groups led by students or for formal writing seminars offered by departments or graduate colleges. The techniques described will help new faculty advise their students more effectively and even achieve greater fluency in their own writing.
