H F W Taylor was for many years Professor of Inorganic Chemistry at the University of Aberdeen, Scotland. Since 1948, his main research interest has been the chemistry of cement. His early work laid the foundations of our understanding of the structure at the nanometre level of C-S-H, the principal product formed when cement is mixed with water, and the one mainly responsible for its hardening. Subsequent studies took him into many additional aspects of the chemistry and

materials science of cement and concrete. His work has been recognized by Fellowships and by other honours and awards from many scientific societies in the UK, USA and elsewhere. This second edition of Cement chemistry addresses the chemistry and materials science of the principal silicate and aluminate cements used in building and Civil engineering. Emphasis throughout is on the underlying science. The book deals more specifically with the chemistry of Portland

cement manufacture and the nature of the resulting product, the processes that occur when this product is mixed with water, the nature of the hardened material, the chemistry of other types of hydraulic cement, and chemical and microstructural aspects of concrete, including processes that affect its durability. Since the first edition of this book was published in 1990, research throughout the world has greatly augmented our knowledge in all of these

areas. The present edition has been updated and revised to take account of these advances. The reader will acquire a solid understanding of the subject and will be better equipped to deal with the problems and pitfalls that can arise in engineering practice as a result of inadequate understanding of the relevant chemistry. It will serve both as an introduction to those entering the subject for the first time and as a guide to the latest developments for those already experienced in

the field.

Pennsy Power Springer Science & Business Media Agricultural Statistics is published each year to meet the diverse need for a reliable reference book on agricultural production, supplies, consumption, facilities, costs, and returns. Its tables of

annual data cover a wide variety of facts in forms suited to most common use. Statistics presented in many of the tables represent actual counts of the items covered. Most of the statistics relating to foreign trade and to government programs, such as numbers and amounts of loans made to farmers, and amounts of loans made by the Commodity Credit Corporation, etc., are data of this type. A large number of other tables, however, contain data that are estimates made

by the Department of Agriculture. The estimates for crops, livestock, and poultry made by the U.S. Department of Agriculture are prepared mainly to give timely current state and national totals and averages. They are based on data obtained by sample surveys of farmers and of people who do business with farmers. The survey data are supplemented by information from the Censuses of Agriculture taken every five years and check data from various sources. Being

estimates, they are subject to revision as more data become available from commercial or government sources. Unless otherwise indicated, the totals for the United States shown in the various tables on area, production, numbers, price, value, supplies, and disposition are based on official Department estimates. They exclude states for which no official estimates are compiled. Extensive table data include statistics of the following:

- Statistics of Grain and

- Feed -Cotton, Tobacco, Sugar Crops, and Honey - Oilseeds, Fats, and Oils - Vegetables and Melons - Hay, Seeds, and Minor Field Crops -Cattle, Hogs, and Sheep -Dairy and Poultry -Insurance, Credit & Cooperatives - Agricultural Conservation & Forestry -Consumption & Family Living -Fertilizers & Pesticides
- Miscellaneous Agricultural Statistics such as Foreign Agricultural Trade Statistics including exports, fisheries and more. Professionals in the following fields to include

farmers, ranchers, soil conservationists, surveyors, agricultural economist consultants, livestock manufacturers, livestock feedlot operators, food distributors, animal scientists, food chemists, food brokers, farm and land appraisers (and more) may have the greatest interest in this volume.

The American Farmer

Voyageur Press

From Allis-Chalmers to Vickers, here is an A-Z of tractors made in Britain between 1945 and 1965, written by a universally acknowledged expert in the subject, whose work has been widely published in books and magazines. *British Tractors* deals with the products of not only British manufacturers such as David Brown, Ferguson and Nuffield, but also the American makers who established plants in

Britain to overcome postwar import restrictions, which included International Harvester, Massey-Harris and Minneapolis-Moline. Demand for tractors after the War was insatiable, and the period covered saw extraordinary growth in production and innovation in design. The text is illustrated exclusively with images - some 400 in all - from the manufacturers' sales brochures and publicity material, giving a unique flavour of the times and an impression of the

features the manufacturers were highlighting in the promotion of their tractors.

Veteran journalist and four-wheel drive historian Jim Allen and recognized collector and Scout expert John Glancy built the most in-depth book about Scout trucks on the market. The book includes details about all your favorite Scout models from the very first to the last one to leave the factory and some the public never

saw.

It is now time for a
comprehensive treatise to
look at the whole field of
electrochemistry. The
present treatise was
conceived in 1974, and
the earliest invitations to
authors for contributions
were made in 1975. The
completion of the early
volumes has been

delayed by various
factors. There has been
no attempt to make each
article emphasize the
most recent situation at
the expense of an overall
statement of the modern
view. This treatise is not a
collection of articles from
Recent Advances in
Electro chemistry or
Modern Aspects of
Electrochemistry. It is an
attempt at making a
mature statement about
the present position in the
vast area of what is best
looked at as a new
interdisciplinary field.
