Debates about the legacy of colonialism in France are not new, but they have taken on new urgency in the wake of recent terrorist attacks. Responding to acts of religious and racial violence in 2005, 2010, and 2015 and beyond, the essays in this volume pit French ideals against government-sponsored revisionist decrees that have exacerbated tensions, complicated the process of establishing and recording national memory, and triggered divisive debates on what it means to identify as French. As they document the checkered legacy of French colonialism, the contributors raise questions about France and the contemporary role of Islam, the banlieues, immigration, race, history, pedagogy, and the future of the Republic. This innovative volume reconsiders the cultural, economic, political, and social realities facing global French citizens today and includes contributions by Achille Mbembe, Benjamin Stora, Françoise Vergès, Alec Hargreaves, Elsa Dorlin, and Alain Mabanckou, among others.

This book expands on Archaeological Human Remains: Global Perspectives that was published in the Springer Briefs series in 2014 and which had a strong focus on post-colonial countries. In the current volume, the editors include papers that deal with non-Anglophone European traditions such as Portugal, Germany and France. In addition, authors continue the exploration of osteological trajectories that are not well-documented in the West, such as Senegal, China and Russia. The lasting legacies of imperialism, communism and colonialism are apparent as the authors of the individual country profiles examine the historical roots of the study of archaeological human remains and the challenges encountered while also considering the likely future directions likely of this multi-faceted discipline in different world areas.

Quand la folie parle presents a timely reinvigoration of the complex subject of madness and its literary manifestations. This stimulating study, authored by a range of young and talented international scholars, is of key importance in defining and refining our ongoing endeavours to theorise and analyse the literary representations of the problematics of mental health. By including discussions of texts that speak of madness as well as those that speak from madness, this volume demonstrates that, in fact, the non-sense of madness achieves a force of expression often more powerful than the usual order of logic. Embracing the scientific, the religious, the medical, the psychoanalytic, the historical, the erotic, and, of course, the properly literary, this wide-ranging, historically-informed collection is particularly significant in its exploration of both the "madwoman" and the "madman," and exhibits an inclusiveness which extends to the genres and modes of the texts examined. The authors discussed,

from Nerval and Houellebecq to NDiaye and Lê, provide a refreshingly "balanced" picture of mental illness, presenting madness or depression as a contestatory, creative stance against often mind-numbing social, racial or consumerist conventions, while refusing to play down the inevitable difficulties accompanying this isolating condition. The "dialectic effect" referenced in the title of the collection extends not only to the dynamics at work within the volume itself, as the different contributions implicitly dialogue with one another, but equally to the reader of these essays, who is engaged throughout in the debates put forward.

This book presents a series of highly readable, well-documented essays describing French life styles, attitudes, and entertainments as well as the writers and performers currently favored by the French public. Several chapters explore French tastes in popular literature and other reading matter, including comics, cartoons, mystery and spy fiction, newspapers and magazines, and science fiction. Film, popular music, radio, and television are also discussed in detail, and influences from other cultures--particularly American "imports"--are assessed. The remaining essays examine French sports, leisure, eating and drinking, and relations between men and women.

Over 175 years ago George Catlin, American painter, writer and explorer, realized that the white settlers would eventually destroy the native cultures of North America. Devoting his life to preserving the Indian heritage, he traveled throughout the West sketching and painting hundreds of Indian portraits, village scenes, religious rituals and games. Eager to preserve the vanishing tribes and customs of the Native Americans through his art, his encounters with these fascinating people resulted in the book, The North American Indians, a collection of his letters with over 400 illustrations. Catlin toured Europe for eight years presenting his famous collection of portraits and sketches. As a result of this tour, Catlin published ADVENTURES OF THE OJIBBEWAY AND IOWAY INDIANS concentrating on these two intriguing tribes in this two-volume set.

« C'est arrivé d'un seul coup, j'ai décidé de devenir architecte. La science, l'art, les deux m'attiraient. Pourquoi pas l'un et l'autre ? N'y avait-il pas des lieux de confluence ? L'architecture, sans doute parce que j'en ignorais absolument tout, m'a paru être l'un d'eux. C'est ainsi que je l'ai découverte, puis aimée. J'ai compris qu'on n'était jamais architecte, pas plus qu'on n'est peintre ou poète, mais qu'on pouvait chaque jour le devenir un peu plus.

Voilà, c'était il y a cinquante ans. J'ai beaucoup parcouru le monde, dessiné, construit, écrit. Le désir ne m'a pas quitté. Il me faudrait deux ou trois vies de plus. » P. A. 1 2 3 4.

Science as an instrument to justify religious missions in secular society The relationship between religion and science is complex and continues to be a topical issue. However, it is seldom zoomed in on from both Protestant and Catholic perspectives. By doing so the contributing authors in this collection gain new insights into the origin and development of missiology. Missiology is described in this book as a "project of modernity," a contemporary form of apologetics. "Scientific apologetics" was the way to justify missions in a society that was rapidly becoming secularized. Mission & Science deals with the interaction between new scientific disciplines (historiography, geography, ethnology, anthropology, linguistics) and new scientific insights (Darwin's evolutionary theory, heliocentrism), as well as the role of the papacy and what inspired missionary practice (first in China and the Far East and later in Africa). The renewed missiology has in turn influenced the missionary practice of the twentieth century, guided by apostolic policy. Some "missionary scholars" have even had a significant influence on the scientific discourse of their time.

The Colonial Legacy in France Odile Jacob

The history of science provides numerous examples of the way in which imagination, religion and mythology have sometimes helped and sometimes hindered scientific progress. While established ideas and beliefs clearly held back the discoveries of Copernicus, Galileo and Darwin, the intuitive knowledge found in mythology, art and religion has often proved useful in indicating new ways in which to explore or represent new knowledge of the world. Stories, fables and images have contributed to drawing a fuller picture of the past, understanding the present and imagining the future. The essays in this book, written by academics, writers and artists from various fields ranging from La Fontaine's fables to nanotechnology and modern art, all point out the ways in which imagination works its way into all the fields of knowledge. At both ends of the spectrum, the hybrid nature of the chimera emerges as a pivotal symbol of both man's predation instinct and a powerful symbol of his fear of extinction. This

interdisciplinary book, weaving together visual representation, literature, mysticism, and science, will appeal to historians of science, philosophy, art and religion. It will also be of interest to scholars in cultural studies and anthropology. Drawing on recent scientific research and artistic production, the volume will additionally interest a wider audience wishing to learn more about man's obsession and fascination with the potent symbolism of dinosaurs and dragons and all hybrid forms generated by the human imagination and recent technology.

Portrait of Linguists is the standard biographical work in the history and theory of linguistics and a resource for all scholars of 18th, 19th and early 20th-century Western linguistics. Edited by Thomas A. Sebeok, this text contains articles by eminent scholars in English, French and German. Ninety-one biographies are featured, including Wilhelm von Humboldt, Jacob Grimm, Franz Bopp, Sir William Jones and Max Muller. They constitute a mass of information on the leading figures in linguistics, and include bibliographical information in addition to revealing the authors' thoughts on the various schools of linguistics. Arranged chronologically by subjects' year of birth, this two-volume work is also indexed at the end of volume 2 and is a valuable storehouse of information on the seminal figures in the mainstream of Western linguistics.
