Peoplewatching is the culmination of a career of watching people - their behaviour and habits, their personalities and their quirks. Desmond Morris shows us how people, consciously and unconsciously, signal their attitudes, desires and innermost feelings with their bodies and actions, often more powerfully than with their words.

The Human Animal University of Chicago Press

Few things are as tantalizing as a woman's curves...and yet, humans are the only mammals on earth whose females have curvy bodies. Why? And what does this unique body shape mean for us? In *Curvology*, researcher David Bainbridge uses his scientific know-how to get to the bottom of this anatomical mystery and to explore the social and psychological consequences of our cultural fixation with curves and fat. Bainbridge brings thorough and clear-headed scientific research to this topic, as well as an admirable understanding of the real-life ramifications of the fascinating statistics and provocative studies he cites. Blending evolutionary biology, cultural observation, and cutting-edge psychology, Bainbridge critically synthesizes the science and history of women's body shape, from ancient hominids to the age of the selfie, offering insights into how women's bodies became objects of fascination and raising awareness about what this scrutiny does to our brains. Packed with controversial and compelling findings that drive us to think about the significance of our curves and what they mean for future generations, *Curvology* offers not just a compelling collection of facts and studies, but an endlessly fascinating take on evolution and its consequences.

Their quest would eventually engulf all of physics and astronomy, leading not only to the discovery of quasars, black holes, and shadow matter but also to fame, controversy, and Nobel Prizes. *Lonely Hearts of the Cosmos* tells the story of the men and women who have taken eternity on their shoulders and stormed nature in search of answers to the deepest questions we know to ask. The Secret Surrealist Little, Brown

A must-read for anyone who has ever wondered why people do what they do, from the popular author of *The Naked Ape*. This study concerns the city dweller. Morris finds remarkable similarities with captive zoo animals and looks closely at the aggressive, sexual and parental behaviour of the human species under the stresses and pressures of urban living. 'Compelling and absorbing...Morris is concerned with the tension between our biology and our culture, as it is expressed in power, sex, status and war games' *New York Times*

Sentient Clarke, Irwin ; London : J. Cape

Monkeys populate our culture, from the adorable hijinks of

Curious George and the loyal friendship between Aladdin and Abu to the menacing gait of the winged ones in *The Wizard of Oz*. We visit them in zoos and even sometimes keep them as pets à la Catherine de Medici and Michael Jackson. As renowned zoologist Desmond Morris shows, it is not surprising that we are so attracted to them. While we sometimes view monkeys as trivial or comic, their mischievousness is delightful, and their urge to explore and love of activity fascinate us. Monkey unpacks human attitudes toward these animals, tracing our connection with them throughout history. Morris reveals that our fascination with monkeys extends through many cultures and eras—ancient Egyptians revered baboons, monkey deities featured prominently in ancient Chinese and Japanese religions, and sacred status was given to the langur monkey by some groups in India. He also describes how our relationship with monkeys has changed since Darwin, and even become more troubled—this in-depth knowledge of our own origins amplifies our identification with and concern for the idea of monkeys' primitivism and destructive behaviors. Drawing a vibrant picture of these beguiling animals and their continued popularity with humans, *Monkey* brings a new understanding to our complicated relationship with the ever-curious George.

Christmas Watching Thames & Hudson

No other art movement in history has contained two artists as different as Magritte and Miró. This is because Surrealism was not in origin an art movement, but a philosophical strategy. It was a way of life a rebellion against the establishment that had given the world the hideous slaughter of the First World War. Instead of trying to analyse the work of the Surrealists, bestselling author and Surrealist artist Desmond Morris concentrates on them as people as remarkable individuals. What were their personalities, their predilections, their character strengths and flaws? Did they enjoy a social life or were they loners? Were they bold eccentrics or timid recluses? Drawing on the authors personal knowledge of the Surrealists, this book captures their life histories, idiosyncrasies and often-complex love lives, vividly illustrated with images of the artists and their works. The arts of Surrealism were both spectacular and international, shaped by the darkest, most irrational workings of the unconscious. Shocking, witty and always entertaining, Morris tales illuminate the striking variation in approaches to the Surrealist philosophy, both in the artists work and in their lives.

The Human Zoo Abrams

A leading researcher on human evolution proposes a new and controversial theory of how our species came to be In this groundbreaking and engaging work of science, world-renowned paleoanthropologist Chris Stringer sets out a new theory of humanity's origin, challenging both the multiregionalists (who hold that modern humans developed from ancient ancestors in different parts of the world) and his own "out of Africa" theory, which maintains that humans emerged rapidly in one small part of Africa and then spread to replace all other humans within and outside the continent. Stringer's new theory, based on archeological and genetic evidence, holds that distinct humans coexisted and competed across the African continent—exchanging genes, tools, and behavioral strategies. Stringer draws on analyses of old and new fossils from around the world, DNA studies of Neanderthals (using the full genome map) and other species, and recent archeological digs to unveil his new theory. He shows how the most sensational recent fossil findings fit with his model, and he questions previous concepts (including his own) of modernity and how it evolved. *Lone Survivors* will be the definitive account of who and what we were, and will change perceptions about our origins and about what it means to be human.

How does city life change the way we act? What accounts for the increasing prevalence of violence and anxiety in our world? In this new edition of his controversial 1969 bestseller, *The Human Zoo*, renowned zoologist Desmond Morris argues that many of the social instabilities we face are largely a product of the artificial, impersonal confines of our urban surroundings. Indeed, our behavior often startlingly resembles that of captive animals, and our developed and urbane environment seems not so much a concrete jungle as it does a human zoo. Animals do not normally exhibit stress, random violence, and erratic behavior until they are confined. Similarly, the human propensity toward antisocial and sociopathic behavior is intensified in today's cities. Morris argues that we are biologically still tribal and ill-equipped to thrive in the impersonal urban sprawl. As important and meaningful today as it was a quarter-century ago, *The Human Zoo* sounds an urgent warning and provides startling insight into our increasingly complex lives.
