 Please note this title is suitable for any student studying: Exam Board: Edexcel Level: A Level Year 1 and AS Subject: Geography First teaching: September 2016 First exams: June 2018 A student-friendly and engaging textbook for the Edexcel GCE A Level Year 1 and AS specifications. It has been specially written to match the demands of the 2016 specifications and has been endorsed for Edexcel. The coverage of key geographical concepts and processes is accessible and clear, and all students will be engaged by the interesting, up-to-date

examples and case studies - while the rigour, detail, and depth required by the specifications is retained throughout. Clearly-written objectives open each section, setting out for students what they need to learn, and high-quality photos, maps, and diagrams aid explanations. Motivating activities, exam-style questions, and coverage of the required skills are strong features. The book is completed with a glossary for each chapter and a full index. Answer guidance for the activities is available on Kerboodle (school purchase only). *GCSE ICT* Cambridge University Press

 The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex

problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve

more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below:

Cognitive skills: nonroutine problem solving, critical thinking, systems thinking

Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity

Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning

Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both

parts of the third workshop.
