As he faces a devastating personal loss, Detective Michael Bennett is about to take on the most sinister challenge of his career: a kidnapping crisis that could destroy the most powerful people in America. The nation has fallen into mourning after the unexpected death of a beloved former First Lady, and the most powerful people in the world gather in New York for her funeral. Then the inconceivable occurs: Billionaires, politicians, and superstars of every kind are suddenly trapped within one man's brilliant and ruthless scenario. Bennett, father of ten, is pulled into the fray. As the danger escalates, Michael is hit with devastating news: After fighting for many years, his wife has succumbed to a terrible disease. As New York descends into chaos, Bennett has lost the great love of his life and faces raising his ten devastated children alone-and rescuing 34 hostages. Day after day, Bennett confronts the most ruthless man he has ever dealt with, a man who kills without hesitation and counters everything the NYPD and FBI throw at him with impunity. As the entire world watches and the tension boils to a searing heat, Bennett has to find a way out-or face responsibility for the greatest debacle in history.

The Official MP3.com Guide to MP3 Little, Brown

In this book, your children will begin exploring the dynamics of flight and animal classification, understanding why the design we see in these incredible creatures points us to our Creator God. Then, get ready for the exciting adventure of learning about birds. Your children will learn how to attract various bird species to your yard and identify them by looking at their special physical characteristics, diverse nests, and interesting domestic practices. They will also learn the anatomy and the glorious design that enables birds to do remarkable things. The text contains actual experiments on the preferences and habits of the birds your children see. These experiments further enrich the learning experience. After becoming amateur ornithologists, your children will explore the world of chiropterology, which is the study of bats. They will be able to intelligently share with others the value of bats in our world while exposing the misconceptions that most people have regarding these docile creatures of the night. Your children will then investigate entomology, the study of insects. They will learn to scientifically classify insects they find in their yard by a simple glance at their wings and other important characteristics. In addition to designing experiments with flies, crickets, darkling moths, and caterpillars, they will also learn how to attract and catch insects for scientific study. When your children complete this study of zoology, they will never view nature in the same way again. Their

eyes will be open to the different species that live in their midst, enjoying and understanding nature to the fullest.

Vacations will become educational experiences as they notice birds and insects inhabiting the areas they visit. By learning to keep a field journal, they will be able to notice unusual circumstances or sudden increases in bird or insect populations. They will become true scientists as they come to know nature and the fascinating world that God created. Grades K-6.

With MP3 technology, the era of accessing the full range of the world's music and customizing it to individual taste has arrived. Written by music industry insider and former computer programmer Chris Gilbey, *MP3 and the Infinite Digital Jukebox* shows how to take advantage of this revolution. The book offers clear and simple instructions on how and where to find all the necessary applications for getting instant musical gratification from the new online music devices on the market. Topics covered include information about all the music file types, how to play them, how to "rip" them, how to burn your own CDs, and how to send music to others. The book reviews all the latest software and hardware, but also shows how it's possible to avoid the expense and use existing resources.

This book takes a look at the shocking war being waged over your CD collection, a struggle that will determine who controls popular music - and to a large extent, popular culture - in the coming years. It's a battle of multinational corporate giants versus Internet entrepreneurs working out of their bedrooms, challenging the fat cats who have built fortunes on the bones of underpaid musicians. It's also a war for the hearts and minds of a new generation and a culture that doesn't feel the need to hold a plastic disc in its hands to enjoy music.

This book begins with a lesson on the

nature of astronomy, and then it covers the major structures of our solar system. Starting with the sun and working towards Pluto, the student will learn details about all nine planets (or is it eight? - your student will have to decide) in the solar system. Along the way, the student will also learn about Earth's moon, the asteroid belt, and the Kuiper belt. After that, the student will move outside our solar system and learn about the stars and galaxies that make up God's incredible universe. Finally, the student will learn about space travel and what it takes to be an astronaut! The activities and projects use easy-to-find household items and truly make the lessons come alive! They include making a solar eclipse, simulating the use of radar to determine a hidden landscape, and making a telescope. We recommend that you spend the entire school year covering this book, devoting approximately two sessions per week to the course.
