This book details the histologic clues in diagnosing the inflammatory dermatoses and neoplastic process of the vulva. The inflammatory dermatoses are divided into histologic patterns to aid recognition. Expert authors provide updates on ancillary techniques such as special stains, immunohistochemistry

and chromogenic in situ hybridization when applicable. New advances in classifying squamous lesions as well as staging melanocytic lesions are outlined. They include the recent CAP/ASCCP (College of American Pathologists and the American Society for Colposcopy and Cervical Pathology) lower anogenital squamous terminology for HPV-associated lesions and the 2009 AJCC (American Joint Committee on Cancer) staging system for melanoma. New advances

in molecular findings and potential targeted therapy are discussed for the squamous, melanocytic, adnexal and soft tissue tumors whenever it is pertinent. Vulvar Pathology will be a useful diagnostic guide for general pathologists, pathology trainees, dermatopathologists, dermatologists, and gynecologic pathologists in rendering diagnoses in vulvar inflammatory dermatoses as well as melanocytic, squamous, adnexal, and soft tissue neoplasms of the vulva.

This publication is the

second in a series of lessons learned reports which examine how the U.S. government and Departments of Defense, State, and Justice carried out reconstruction programs in Afghanistan. In particular, the report analyzes security sector assistance (SSA) programs to create, train and advise the Afghan National Defense and Security Forces (ANDSF) between 2002 and 2016. This publication concludes that the effort to train the ANDSF needs to continue, and provides

recommendations for the SSA programs to be improved, based on lessons learned from careful analysis of real reconstruction situations in Afghanistan. The publication states that the United States was never prepared to help create Afghan police and military forces capable of protecting that country from internal and external threats. It is the hope of the Special Inspector General for Afghanistan Reconstruction (SIGAR), John F. Sopko, that this publication, and other

SIGAR reports will create a body of work that can help provide reasonable solutions to help United States agencies and military forces improve reconstruction efforts in Afghanistan. Related items: Counterterrorism publications can be found here:

History of Pharmacy Mentorship is a catalyst capable of unleashing one's potential for discovery, curiosity, and participation in STEM and subsequently improving the training environment in which that STEM potential is fostered. Mentoring

relationships provide developmental spaces in which students' STEM skills are honed and pathways into STEM fields can be discovered. Because mentorship can be so influential in shaping the future STEM workforce, its occurrence should not be left to chance or idiosyncratic implementation. There is a gap between what we know about effective mentoring and how it is practiced in higher education. The Science of Effective Mentorship in STEM studies mentoring

programs and practices at the undergraduate and graduate levels. It explores the importance of mentorship, the science of mentoring relationships, mentorship of underrepresented students in STEMM, mentorship structures and behaviors, and institutional cultures that support mentorship. This report and its complementary interactive guide present insights on effective programs and practices that can be adopted and adapted by institutions,

departments, and individual faculty members.
