### Classics in the Modern World

PediaPress

Classics in the Modern World explores the features and implications of a 'democratic turn' in modern perceptions of the ancient world. Exploring the relationship between Greek and Roman ways of thinking and modern definitions of democratic practices and approaches, it enables a wider re-evaluation of the role of classics in the modern world.

### Big Money in Books Rowman & Littlefield

Workbook in Introductory Economics, Third Edition, is designed to help readers learn and use economics, to aid in testing their level of understanding, and to improve their skills in answering multiple-choice and data-response questions. This workbook, unlike many others, is not written to "accompany" a particular text, but to be suitable for use with the standard ones on the market. The book begins with discussion of the subject of economics. This is followed by separate chapters on concepts such as supply and demand; production and distribution;

national income; money, banking, and prices; international trade; and economic policy. Each chapter is divided into four main sections—textual summaries of the ground covered, questions and problems in economic analysis, questions and exercises on the U.K. economy, and essays. The book also includes a Reading Guide, which lists the major British standard general textbooks at an introductory level as well as one or two of the best-known American and a small number in special fields.

This is economics (see, monetary economics) and corresponding economic history and focuses on what the book title suggests: money and market developing from their very beginnings. First, some crucial („hot“) historical points are here identified: the market picture before money entering history, then getting national and international through what was the „gold standard“; money out of its metal „base“ or „cover“; money as national and international after gold. Second, a substantial debate reaches another level of developments: „representative“, versus „fiat“ money (?). Third, how about international money, as different from national (scale) money in context?

This text provides an introduction to the central tenets of economic theory. Each section of the book takes the reader from the elementary to the more advanced theories and applications, and is written from a Southern African perspective.

*Bibliographic Guide to Business and Economics* Routledge

The Science of Service Systems intends to stimulate discussion and understanding by presenting theory-based research with actionable results. Most of the articles focus on formalizing the theoretical foundations for a science of service systems, examining a wide range of substantive issues and implementations related to service science from various perspectives. From the formal (ontologies, representation specifications, decision-making and maturity models) to the informal (analysis frameworks, design heuristics, anecdotal observations), these contributions provide a snapshot in time of the gradually emerging scientific understanding of service systems. The Science of Service Systems, along with its companion text, Service Systems Implementation, is designed to present multidisciplinary and multisectoral perspectives on the nature of service systems, on research and practice in service, and on the future directions to advance service science. These two volumes compose a collection of articles from those involved in the emerging area known as service science.

*An Introduction to the Green Economy*

GMB Publishing Ltd

This volume brings together essays on the relations between fiction and the economy, all established or emergent scholars from different fields of expertise. The essays range widely in their respective foci, extending beyond purely literary studies to encompass history, the history of language, studies in the visual arts, and philosophy.

Combining research approaches from biology, philosophy and linguistics, the field of Biosemiotics proposes that animals, plants and single cells all engage in semiosis – the conversion of objective signals into conventional signs. This has important implications and applications for issues ranging from natural selection to animal behavior and human psychology, leaving biosemiotics at the cutting edge of the research on the fundamentals of life. Drawing on an international expertise, the book details the history and study of biosemiotics, and provides a state-of-the-art summary of the current work in this new field. And, with relevance to a wide range of disciplines – from linguistics and

semiotics to evolutionary phenomena and the philosophy of biology – the book provides an important text for both students and established researchers, while marking a vital step in the evolution of a new biological paradigm.

The green economy is widely seen as a potential solution to current global economic and environmental crises, and a potential mechanism by which sustainable development might be achieved in practice. Considerable investments are now being made into the development of green technology, renewable energy, biodiversity conservation, resource efficiency, recycling of materials and green infrastructure. This textbook provides a comprehensive introduction to the green economy, using a strongly interdisciplinary approach based on environmental science, rather than treating it as a sub-set of economics. The scientific principles of sustainability are presented, which provide the foundations of the green economy, with a particular focus on systems-based approaches. Examples of real-world case studies are used to illustrate how the green economy

can be achieved in practice. In this way, the authors provide a thorough overview of both the principles and practice of the green economy, drawing from a wide range of disciplines including ecology, geography, social science, psychology, sustainability science, environmental science, law and economics. The emphasis is on presenting results of the latest research, derived from leading scientific journals. Rather than focusing on a single definition of what constitutes a 'green economy', the book introduces readers to the diversity of opinion that exists, and engages them in what is an active, on-going debate. This reflects the fact that many aspects of the green economy, and sustainable development more generally, are currently contested. In particular, the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented, and to actively contribute to the future development of the green economy.

*Introduction to e-Business* Springer  
Science & Business Media

The 13 volumes in this set, originally published between 1920 and 1991, draw together research by leading academics in the area of labour economics and provides a rigorous examination of related key issues. The volumes examine housing and labour markets, labour supply, and labour migration. This set will be of particular interest to students of Economics and Business Studies.

*Small Corpus Studies and ELT* SAGE

Widely adopted, this text critically evaluates the leading theories of international economic development, from classical economic and sociological models to Marxist, poststructuralist, and feminist perspectives. No other book provides such comprehensive coverage or links the theories as incisively to contemporary world events and policy debates. Reexamining neoliberal conceptions of economic growth, the authors show what a

more just and democratic form of development might look like today.

"Giffen goods" and "the Giffen paradox" are alluded to in every standard economics textbook, yet there is no comprehensive reference work available. This book considers the life and career of Robert Giffen and his writings on poverty in the mid-nineteenth century. Containing an extensive review of literature on the paradox, it explores the origins of this

perverse form of consumer behaviour and discusses its relevance for the late twentieth century. Contents: Introduction; Retrospect; Robert Giffen; Giffen and the Poor; The Paradox Statement; Giffen's Paradox; Before and After Giffen; Rehabilitation and Debate; Epilogue; Bibliographical Notes; Index<sup>R</sup>

**Communities** Juta and Company Ltd  
This new study takes a keen look at the problems facing the international community due to conflicts arising from applications of varying competition laws by different competition authorities to

international airline alliances. As a result of privatisation, deregulation, liberalisation and globalisation, international air carriers form alliances with one another in order to cope with growing competition in the international air transport market. This book clearly provides an introduction to the background to and origin of airline alliances, different models of alliances and the related anti-competitive practices resulting from existing international airline alliances. The potential anti-competitive practices resulting from these cross-border alliances trigger a great deal of concern from various competition authorities. Thus, this study goes on to provide a detailed analysis regarding the relevant EC competition law and US antitrust law and their applications to alliance activities. The comparison of different applications of EC competition law and US antitrust law to international airline alliances provides leading research results first-hand. In the conclusion, the essential elements regarding establishing a level playing field in the international air transport market are identified and the author provides possible solutions for the harmonisation of different applications of competition law to

international airline alliances.

*A Handbook of World Trade* Routledge  
The book explores aspects of reflexivity and interactivity in a variety of academic genres: oral and written, scientific and educational. Academic discourse is explored from a variety of perspectives that take a dialogic view of language use as their starting point, ranging from conversation analysis to descriptive or applied genre studies. Particular attention is paid to the way metadiscursive expressions contribute to a representation of the communicative procedures that characterise the ongoing (scientific and educational) dialogues.

As we approach the end of the second millennium, we find ourselves in times of radical social change. Orthodox explanations of the economy, the environment and the development process are unable to provide coherent policies for such issues as employment creation, environmental degradation and social progress. *Economy-Environment-Development-Knowledge* provides alternative perspectives on these fundamental aspects of human existence. Economists, environmentalists, and development theorists have so far been unable to agree on the most successful prescriptions to address problems. To understand, contrast and compare alternative understandings of economic, environmental and development issues, we need to be aware why theorists conceptualise the process of social experience so differently. Part 1 of

*Economy-Environment-Development-Knowledge* addresses the subjective preference, cost-of-production and abstract labour theories of values in economics; Part 2 explains egocentrism, ecocentrism and socioecocentrism as competing theoretical perspectives in environmental theory; Part 3 highlights modernisation theory, structuralist theory and class struggle as ways to account for the process of development and Part 4 examines the generation of knowledge through positivism, paradigms and praxis, legitimating competing perspectives in economics, environmentalist and development. The book concludes by considering why different people find alternative explanations more or less plausible. By addressing the disagreements between theorists, *Economy-Environment-Development-Knowledge* provides a unique basis to contrast and compare the plethora of theories of, and policies for, economic prosperity, environmental sustainability and social progress.

Recent developments in this field of small corpus studies, largely brought about by the personal computer, have yielded remarkable insights into the nature and use of real language. This book presents work by a number of leading researchers in the field and covers a series of topics directly related to language teaching and

language research. The ultimate aim of this book is to encourage the exploitation of small corpora by the ELT profession to make language learning more effective. In addition to descriptions of the basic corpus analysis tools, chapters in the collection cover syllabus and materials design, comparisons of different genres,

descriptions of local and functional grammars, compilation and use of learner corpora, and making cross-linguistic comparisons. The message of this collection is that language use is purposeful and culture specific and that small corpus analysis is an effective method of linguistic investigation. Preface by: John Sinclair;
