Landscape designers have long understood the use of plants to provide beauty, aesthetic pleasure and visual stimulation while supporting a broad range of functional goals. However, the potential for plants in the landscape to elicit human involvement and provide mental stimulation and restoration is much less well understood. This book meshes the art of planting design with an understanding of how humans respond to natural environments. Beginning with an understanding of human needs, preferences and responses to landscape, the author interprets the ways in which an understanding of the human-environment interaction can inform planting design. Many of the principles and techniques that may be used in planting design are beautifully illustrated in full colour with examples by leading landscape architects and designers from the United Kingdom, Europe, North America and Asia, including: Andrea Cochran, Andrea Cochran Landscape Architecture, San Francisco, CA Design Workshop Inc. Richard Hartlage, Land Morphology, Seattle, WA Shunmyo Masuno, Japan Landscape Consultants Ltd., Yokohama Piet Oudolf, Hummelo, The Netherlands Melody Redekop, Vancouver Christine Ten Eyck, Ten Eyck Landscape Architects Inc., Austin, TX Kongjian Yu, Turenscape Ltd., Beijing. The book stimulates thought, provides new direction and assists the reader to find their own unique design voice. Because there are many valid processes and intentions for landscape design, the book is not intended to be overly prescriptive. Rather than presenting a strict design method and accompanying set of rules, Planting Design provides information, insight and inspiration as a basis for developing the individual designer's own expression in this most challenging of art forms.

Infrastructure resources are the subject of many contentious public policy debates, including what to do about crumbling roads and bridges, whether and how to protect our natural environment, energy policy, even patent law reform, universal health care, network neutrality regulation and the future of the Internet. Each of these involves a battle to control infrastructure resources, to establish the terms and conditions under which the public receives access, and to determine how the infrastructure and various dependent systems evolve over time. Infrastructure: The Social Value of Shared Resources devotes much needed attention to understanding how society benefits from infrastructure resources and how management decisions affect a wide variety of interests. The book links infrastructure, a particular set of resources defined in terms of the manner in which they create value, with commons, a resource management principle by which a resource is shared within a community. The infrastructure commons ideas have broad implications for scholarship and public policy across many fields ranging from traditional infrastructure like roads to environmental economics to intellectual property to Internet policy. Economics has become the methodology of choice for many scholars and policymakers in these areas. The book offers a rigorous economic challenge to the prevailing wisdom, which focuses primarily on problems associated with ensuring adequate supply.

The author explores a set of questions that, once asked, seem obvious: what drives the demand side of the equation, and how should demand-side drivers affect public policy? Demand for infrastructure resources involves a range of important considerations that bear on the optimal design of a regime for infrastructure management. The book identifies resource valuation and attendant management problems that recur across many different fields and many different resource types, and it develops a functional economic approach to understanding and analyzing these problems and potential solutions.

In the Fourteenth Edition of *Sociology: Exploring the Architecture of Everyday Life*, David Newman shows students how to see the "unfamiliar in the familiar"—to step back and see organization and predictability in their take-for-granted personal experiences. With his approachable writing style and lively anecdotes, the author's goal from the first edition has been the same: to write a textbook that "reads like a real book." Many adopters of this book are fans of Peter Berger's classic works, which helped introduce the idea of "social constructionism" to sociology. Newman uses the metaphors of "architecture" and "construction" to help students understand that society is not something that exists "out there," independently of themselves; it is a human creation that is planned, maintained, or altered by individuals. Using vivid prose, current examples, and fresh data, this text presents a unique and thought-provoking overview of how society is constructed and experienced. Instead of surveying every subfield in sociology, the more streamlined coverage (14 chapters) focuses on the individual and society, the construction of self and society, and social inequality in the context of social structures. This title is accompanied by a complete teaching and learning package in SAGE Vantage, an intuitive learning platform that integrates quality SAGE textbook content with assignable multimedia activities and auto-graded assessments to drive student engagement and ensure accountability. Unparalleled in its ease of use and built for dynamic teaching and learning, Vantage offers customizable LMS integration and best-in-class support.

A classic examination of superb design through the centuries. Widely regarded as a classic in the field, *Experiencing Architecture* explores the history and promise of good design. Generously illustrated with historical examples of designing excellence—ranging from teacups, riding boots, and golf balls to the villas of Palladio and the fish-feeding pavilion of Beijing's Winter Palace—Rasmussen's accessible guide invites us to appreciate architecture not only as a profession, but as an art that shapes everyday experience. In the past, Rasmussen argues, architecture was not just an individual pursuit, but a community undertaking. Dwellings were built with a natural feeling for place, materials and use, resulting in "a remarkably suitable comeliness." While we cannot return to a former age, Rasmussen notes, we can still design spaces that are beautiful and useful by seeking to understand architecture as an art form that must be experienced. An understanding of good design comes not only from one's professional experience of architecture as an abstract, individual pursuit, but also from one's shared, everyday experience of architecture in real time—its particular use of light, color, shape, scale, texture, rhythm and sound. *Experiencing Architecture* reminds us of what good architectural design has accomplished over time, what it can accomplish still, and why it is worth pursuing. Wide-ranging and approachable, it is for anyone who has ever wondered "what instrument the architect plays on."

The background of this research is related to innovative lightweight construction methods for short-term applications realized with highly recyclable materials produced from renewable resources. Specifically, the possibility of using selected paper-based products for design purposes is examined. The main topic discussed regards the state of the art and future potential of joining techniques for assemblies and structures designed with paper-based products. In this context, the preference on paper-tubes for a variety of designs is examined closely. A collection of case studies for selected joining techniques supported with digital tools, fabrication of prototypes and targeted structural experiments demonstrates possibilities and considerations. This book presents the research process and aims to inspire architects, designers and engineers who are eager to discuss on material innovation and the steps that need to be taken to examine the feasibility of such ideas.

Current design modes of student residences are facing challenges of both philosophy and form. Past approaches no longer sustain new demands and require innovative thinking. The need for a new outlook is propelled by fundamental changes that touch upon environmental, economic, and social factors. Thinking innovatively about university accommodation led to the idea to write Innovative Student Residences. The author offer a fascinating insight into contemporary design concepts and illustrates them with outstanding examples, showcased by full-color photography and detailed plans.

Jewish designers and architects played a key role in shaping the interwar architecture of Central Europe, and in the respective countries where they settled following the Nazi's rise to power. This book explores how Jewish architects and patrons influenced and reformed the design of towns and cities through commercial buildings, urban landscaping and other material culture. It also examines how modern identities evolved in the context of migration, commercial and professional networks, and in relation to the conflict between nationalist ideologies and international aspirations in Central Europe and beyond. Pointing to the production within cultural platforms shared by Jews and Christians, the book's research sheds new light on the importance of integrating Jews into Central European design and aesthetic history. Leading historians, curators, archivists and architects present their critical analyses further to 'design' the past and push forward a transformation in the historical consciousness of Central Europe. By reconsidering the seminal role of Central European émigré and exiled architects and designers in shaping today's global design cultures, this book further strengthens humanistic, progressive and pluralistic cultural trends in Europe today.
