After the death of her mother, Anna and her father imagine that Heaven might be a place where one can help in God's garden, visit with old friends, and take off one's socks whenever one pleases.

Schmerztagebuch IGI Global

Where Children Sleep presents Mollison's large format photographs of children's bedrooms around the world - including from the USA, Mexico, Brazil, England, Italy, Israel and the West Bank, Kenya, Senegal, Lesotho, Nepal, China and India -

alongside portraits of the children whose bedrooms are featured. Each pair of photographs is accompanied by an extended caption that tells of the story of the child in question - about Kaya in Tokyo whose proud mother spends \$1000 per month on her dresses; about Bilal the Bedouin shepherd boy who sleeps out with his father's herd of goats; about the Nepali girl Indira, who has worked in a granite quarry since she was three years old, and about Ankhohxet, the Kraho boy who sleeps on the floor of a hut deep in the Amazon jungle. Photographed over two years with the support of Save the Children, the book is written and presented for an audience of 7-11 year olds - setting out to interest and engage children in the details of the lives of other children around the world, and the social issues affecting them, while also being a serious photographic essay for an adult

audience. Its striking design features a child's mobile on the cover, printed in glow-in-the-dark ink.

Effective Project Management BMJ Books

Critical Care Neurology, Part I: Neurocritical Care focuses on the care specialists and general neurologists that consult in the ICU and their work with patients in acute, life-threatening situations who are dealing with neurologic or neurosurgical crises emanating from either a preexisting neurologic syndrome or from a new neurologic complication appearing as a result of another medical or surgical critical illness. These two separate clinical situations form the pillars of neurocritical care, hence these practices are addressed via two separate, but closely related, HCN volumes. Chapters in both focus on pathophysiology and management, and are tailored for both general neurologists and active neurocritical specialists, with a specific focus on management over diagnostics. Part I addresses the principles of neurocritical care and the management of various neurologic diseases. Part II addresses the interplay between neurologic complications and the surgical, medical, cardiac, and trauma of critical illnesses that most typically present in the ICU. Provides an essential neurocritical care overview for general neurologists Presents neurocritical care specialists with an update on severe neurological illness management Offers coverage of all the most frequent neurologic diseases requiring intensive care Includes chapters authored by global leaders in the field, providing the broadest, most expert coverage available on the topics discussed

Schmerztagbuch Gulf Professional Publishing

This first-of-its-kind textbook surveys rehabilitation and vocational programs aiding persons with disabilities in remote

and developing areas in the U.S. and abroad. Contributors discuss longstanding challenges to these communities, most notably economic and environmental obstacles and ongoing barriers to service delivery, as well as their resilience and strengths. Intersections of health, social, structural, and access disparities are shown affecting rural disabled populations such as women, racial and sexual minorities, youth, and elders. In terms of responses, a comprehensive array of healthcare and health policy solutions and recommendations is critiqued with regard to health, employment, and service effectiveness outcomes. Included among the topics: Healthcare initiatives, strategies, and challenges for people with disabilities in rural, frontier, and territory settings. Challenges faced by veterans residing in rural communities. The Asia and Pacific region: rural-urban impact on disability. Challenges after natural disaster for rural residents with disabilities. Meeting the needs of rural adults with mental illness and dual diagnoses. Capacity building in rural communities through community-based collaborative partnerships. Disability and Vocational Rehabilitation in Rural Settings makes a worthy textbook for graduate students and upper-level undergraduates in the fields of social work, community and environmental psychology, public health, sociology, education, and geography. Its professional audience also includes vocational rehabilitation counselors serving these dynamic populations.

Neuropsychotherapy Elsevier Health Sciences

This single-volume reference covers the natural course, treatment, and management of all neurological diseases affecting the brain, spinal cord nerves and muscles. This comprehensive text reference seeks to assist physicians with treatment by

providing an easy-to-use compendium covering the treatment and management of all neurological diseases along with details on the natural course of these diseases. Organized for ease of use and quick reference, each chapter presents a neurological disorder or key symptoms and systematically discusses the clinical syndrome and differential diagnosis, natural course, principles of therapy, and practical management of each. Covers wide range of neurological conditions and potential treatments, including the evidence for and against each treatment Describes the spontaneous course of neurological diseases along with discussion of the management of different stages and variants of a disorder Presents special situations and exceptional cases in which alternative therapies should be considered

Oskar Schlemmer (1888–1943) was one of the most versatile all-rounders of the last century and as unusual as a painter as he was as a sculptor, draughtsman, graphic artist, stage designer, wall designer, creator of epochal dance projects and author. His vision was the “new” man living in functional architecture, thinking clearly and acting clearly in the modern age which would never again sink into the chaos of war. The catalogue includes the seven original costumes of the Triadisches Ballett (Triadic Ballet) together with rare documents of the time. The connection

between the all-encompassing attempts at reform of the Bauhaus are discussed as well as Schlemmer's vain attempts to reconcile his “unpolitical” art with the Nazi dictatorship's ideas of state-controlled art. The focus will be directed towards Schlemmer's lofty ethical demands, which always regarded man, typified as a “Kunstfigur” (artistic figure) as the “measure of all things”.

Rehabilitation interventions in the patient with obesity Vintage
 For clinical researchers, students and researchers in biological psychology, physiology, psychophysiology, cognitive psychology, emotion. The connection between acute emotional arousal and heart rate is well known, both from poetry and from the evolutionary survival reflex known as the fight-flight reaction. The connection between stress and disease is also well known. What is less well known is that the heart reacts to nearly all stimuli, independently of physical exertion, during both the day and the night. These changes, known collectively as the “additional heart rate” or AHR, are mostly unconscious and to date have been hard or impossible to study in real life. This book first presents a revolutionary new technique for monitoring and analyzing the additional heart rate during everyday life, and then goes on to show that contemporary theories about emotion, stress, and disease are no longer tenable. This technique, the Freiburg Monitoring System, allows heart rate changes not associated with

physical activity to be assessed objectively, in real-life situations, and to be compared with individuals' subjective feelings at the time. After describing the relevant models and the foundations of the technique, the book then moves on to present the most important results of recent research using the Freiburg Monitoring System. This has involved more than 1,300 subjects of various ages, both male and female, including white and blue collar workers, train and bus drivers, dispatchers, university students, schoolchildren, heart disease patients, and patients with cardiac neurosis and rheumatic diseases, and has looked at topics such as the perception of emotions, the perception of the heart in healthy subjects and patients, stress and strain at the workplace and during leisure time, and physiological monitoring during the night. Convincing research evidence, obtained using a ground-breaking new technique for examining the "additional heart rate" in natural se

Pediatric Psychooncology Springer Nature

This book has been written by several of the world's leading experts in the field of research on emotions. The emphasis

throughout is on practical psychophysiological approaches and concrete results. The authors present an original approach which enables practitioners to differentiate, in an objective psychophysiological manner, positive emotions from negative ones. In this framework emotions are analyzed in the context of response systems.

Neuropsychotherapy is intended to inspire further development and continual empirical updating of consistency theory. It is essential for psychotherapists, psychotherapy researchers, clinical psychologists, psychiatrists, neuroscientists, and mental-health professionals. Profoundly important and innovative, this volume provides necessary know-how for professionals as it connects the findings of modern neuroscience to the insights of psychotherapy. Throughout the book, a new picture unfolds of the empirical grounds of effective psychotherapeutic work. Author Klaus Grawe articulates a comprehensive model of psychological functioning-consistency theory-and bridges the gap between the neurosciences and the understanding of psychological disorders and their treatment. Neuropsychotherapy illustrates that psychotherapy can be even more effective when it is grounded in a neuroscientific approach. Cutting across

disciplines that are characteristically disparate, the book identifies the neural foundations of various disorders, suggests specific psychotherapeutic conclusions, and makes neuroscientific knowledge more accessible to psychotherapists. The book's discussion of consistency theory reveals the model is firmly connected to other psychological theoretical approaches, from control theory to cognitive-behavioral models to basic need theories.

Neurological Disorders Terrace Books

The diagnosis and treatment of patients with BPD can be fraught with anxiety, uncertainty, and complexity. How welcome, then, is the Handbook of Good Psychiatric Management for Borderline Personality Disorder, which teaches clinicians what to do and how to do it, as well as what not to do and how to avoid it. The author, a renowned researcher and clinician, has developed a new evidence-based treatment, Good Psychiatric Management (GPM) that comfortably utilizes cognitive, behavioral, and psychodynamic interventions that are practical and simple to implement. Because psychoeducation is an important component of GPM, the book teaches clinicians how to educate their patients about BPD, including the role of genetics and the expected course of the disease. This approach offers advantages both to practitioners, who become more adept at honest communication, and to patients, who are encouraged to have realistic hopes and to focus on strategies for coping with BPD in daily life. The book is structured for maximum learning, convenience, and utility, with an impressive array of features. Section I provides background on BPD, including the myths that sometimes discourage clinicians from treating these patients and that hamper the effective

treatment of the disorder. Section II, the GPM Manual, provides a condensed and clear description of the most essential and specific GPM interventions that clinicians can learn from and use in everyday practice. Section III, the GPM Workbook, offers case vignettes which reference chapters from the manual. Each vignette has a number of "decision points" where alternative interventions are proposed and discussed. To further facilitate learning, a set of nine interactions is found in a series of online video demonstrations. Here, readers can see in vivo illustrations of the GPM model in practice. Finally, a set of appendices provides critical information, such as a comparison of GPM with other evidence-based treatments of BPD, scaling risk and response strategies, and family guidelines. Designed to be a basic case management text for all hospital, outpatient clinic, or office-based psychiatrists or mental health professionals who assume primary responsibility for the treatment of those with BPD, the Handbook of Good Psychiatric Management for Borderline Personality Disorder constitutes a breakthrough in the treatment of these often misunderstood patients.

The Psychology of Physical Symptoms John Wiley & Sons

Although listening to music in music therapy has a much longer tradition than active music therapy, receptive music therapy in European countries has been strongly neglected for many years. The German edition of this book, published in 2004, is the first to present the most important methods of receptive music therapy in one volume. This volume presents the English edition. 18 well-known European authors present forms of receptive music therapy, which focus on both theoretical and practical aspects. The spectrum of methods and clinical applications is broad:

receptive music therapy as or in psychotherapy (f. ex. Guided Imagery and Music, Regulative Music Therapy, Integrative Music Therapy), as Sound Guided Trance, In Depth Relaxation Therapy, in Anthroposophic Music Therapy, etc. Various case studies of adolescent and adult patients illustrate how to work in different clinical contexts. Theoretical questions are discussed concerning topics such as music and (altered states of) consciousness, music and emotion, music and imagery, music and developmental relationships and music and earliest childhood. This volume provides an extensive overview of Receptive Music Therapy in Germany, Denmark, Sweden and Luxembourg.

Schmerztagebuch American Psychiatric Pub

The many manifestations of migraine can vary dramatically from one patient to another, even within the same patient at different times. Among the most compelling and perplexing of these symptoms are the strange visual hallucinations and distortions of space, time, and body image which migraineurs sometimes experience. Portrayals of these uncanny states have found their way into many works of art, from the heavenly visions of Hildegard von Bingen to Alice in Wonderland. Dr. Oliver Sacks argues that migraine cannot be understood simply as an illness, but must be viewed as a complex condition with a unique role to play in each individual's life.

A new eye-opener on how we can make better decisions—by the author of Gut Feelings In this age of big data we often trust that expert analysis—whether it's about next year's stock market or a person's risk of getting cancer—is accurate. But, as risk expert Gerd Gigerenzer reveals in his latest book, Risk Savvy, most of us, including doctors, lawyers, and financial advisors, often misunderstand statistics, leaving us misinformed and vulnerable

to exploitation. Yet there's hope. In Risk Savvy, Gigerenzer gives us an essential guide to the science of good decision making, showing how ordinary people can make better decisions for their money, their health, and their families. Here, Gigerenzer delivers the surprising conclusion that the best results often come from considering less information and listening to your gut.
