Before choosing sheet metal or suspension components, a motorcycle builder must first make critical frame decisions. Whether the rider opts for hard-tail, soft-tail, or twin shock, the choice affects the bike's cost, appearance, and use. In his third and final book on building V-twin motorcycles, author Tim Remus discusses the pros and cons of various frame designs, the right frame for the reader's use and budget, and the best equipment for the type of frame chosen. Photos illustrate the latest offerings from the aftermarket and how builders are using and equipping the latest frame designs. Chapters address topics such as frame design and construction material, triple trees and fork tubes, shock absorbers, brake components, wheels and tires, and motorcycle electronics. Hands-on sections teach the reader about drive-train alignment, squaring the frame, and going from a bare frame to a rolling chassis with an installed engine.

This is a book for men and women who are building or modifying an American V-Twin Motorcycle. Whether they are building a bike from scratch or adding a 300 tire to the back of a factory Softtail, the products and projects contained in this new Chassis book will help them successfully finish the project. For anyone building a bike from scratch, the Frame chapter includes a discussion of rake and trail angles, as well as a listing of various frame types currently on the market. Current bike owners looking to upgrade wheels or brakes will discover a full chapter on each topic. Is a six-person caliper really that much better than a four? More importantly, is it worth the extra money? And how are the best billet wheels manufactured? This new book by Doug Mitchel contains answers to these questions and a hundred more. Not just a parts-catalog, the Motorcycle Chassis book includes two mock-up assemblies, from bare frame to complete mock-ups with drivetrain, wheels and sheet metal installed.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their

bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

This book presents a step-by-step guide to building a West Coast Chopper's C.F.L. kit. Kit choppers are hot commodities. While few people can afford to buy a custom-built chopper from one of the high-end builders like Jesse James-bikes that often sell for \$100,000 or more-many can afford to buy such bikes in kit form. Because of this, all the high-end builders sell their creations in kit form. For example, while Jesse James might build perhaps a dozen custom bikes per year, he sells hundreds of chopper kits. The same is true of any number of other builders like Matt Hotch, Cyril Huze, and Paul Yaffe. Authored by Mike Seate and featuring the photography of Joe Appel, this book is a step-by-step how-to guide for anyone building a kit chopper.

What started in the mid-90s when a few people decided to build (stock Softails÷ from aftermarket parts-because they couldn't buy one at the dealer-has evolved into a full-blown industry. Today, every small town has a Chopper or Custom bike shop and every cable TV channel has a Biker Build-Off series. No longer content to build copies of stock motorcycles, today's builder wants a motorcycle that's longer, lower, and sexier than anything approved by a factory design team. Wolfgang Publications and Tim Remus were there at the very beginning of the trend with their Ultimate V-Twin Motorcycle book. Today they're back with their new book, *Advanced Custom Motorcycle Assembly & Fabrication*. Part catalog, part service manual, and part inspiration, this new book offers help with planning the project,

getting the right look and actually assembling that custom bike you've dreamed about for years. Three start-to-finish sequences show not just how the best bikes are bolted together, but how the unique one-off gas tanks are shaped and then covered with candy brandywine paint.

Many books have been published about Italian motorcycles, but none has focused exclusively on the Italian motorcycle-based chopper, bobber, trike, and quad custom bike scene - until now. Even though customising is not normally associated with Italian brands, there are some fantastic individually-built Italian custom bikes out there, old and new. In recognition of the trend, Ducati entered into a new market segment when it launched its power cruiser Diavel in November 2010, while Moto Guzzi has its Aquila Nero range ... these and many other custom-style bikes have been well-received in the customs scene. This book looks at some of the fascinating custom projects around the world, accompanied by stunning photography of the finished bikes. A great book for Italian bike fans, and fans of the custom bike scene in general.
