This book provides a comprehensive, state-of-the-art account of the role of immunohistochemistry in the diagnosis of skin tumors, which is crucial given that overlapping histologic features and

unusual morphologic changes can lead to considerable diagnostic uncertainty. The book reviews in detail the sensitivity and specificity of commonly available antibodies and their pattern of immunostaining. readers will learn when to order antibodies and how to interpret findings. In addition, prognostic markers are evaluated and emphasis placed on the pitfalls commonly encountered when evaluating these neoplasms. The text is complemented by a wealth of superb images. Helpful histograms and algorithms are included, and clear guidance is provided on the application and interpretation of less commonly used antibodies and

immunostains. Applied Immunohistochemistry in the Evaluation of Skin Neoplasms will serve as an extremely valuable resource for practicing dermatopathologists and pathologists. Catholicism Rudolf Steiner Press

The Medical Basis for the Healing Power of Intimacy We all know that intimacy improves the quality of our lives. Yet most people don't realize how much it

can increase the quality of our lives -- our survival. In this New York Timesworld-renowned physician Dean Ornish, M.D., writes, "I am not aware of any other factor in medicine that has a greater impact on our survival than the healing power of love and intimacy. Not diet, not smoking, not exercise, not stress, not genetics, not drugs, not surgery." He reveals that the real epidemic in modern culture is not only physical heart disease but also what he calls spiritual heart disease: loneliness, isolation, alienation, and depression. He shows how the very defenses that we think protect us from emotional pain are often the same ones that actually heighten our pain and

threaten our survival. Dr. Ornish outlines eight pathways to intimacy and healing that have made a profound difference in his life and in the life of millions of others in turning sadness into happiness, suffering into joy.

The Rose Cross meditation is central to the western - Rosicrucian - path of personal development as presented by Rudolf Steiner. Steiner repeatedly referred to the meditation as a 'symbol of human development' that illustrates the transformation of the human being's instincts and desires. These work unconsciously in the

soul, and in thought, feeling and will. Through personal development, the 'I' - the essential self - can gain mastery over these unconscious forces of the soul. The Rose Cross meditation features the red rose as an image to which the student, via specific means, aspires. To the plant is added the black cross which, pointing to the mystery of death and resurrection, provides a symbol of the higher development of the human I. The metamorphosis of the roses and the cross into the symbol of the Rose Cross is brought about by the student's inner efforts, creating an entirely new image. This becomes the starting point for further steps along the meditative path. The

Rose Cross meditation is the only pictorial meditation whose content and structure Steiner described in such detail. In this invaluable book, the editor has drawn together virtually all Rudolf Steiner's statements on the subject, arranging them chronologically within the motif of each chapter. His words are supported by commentary and notes.

An unrivalled insight into the early life of Henry Kissinger 'No interviews about my private life' has always been Henry Kissinger's response to curious journalists. But journalist Evi Kurz from Furth, the Kissingers' home town in southern Germany, proposed a family portrait and eventually won the trust of both brothers. This is the story of two

Americans of German-Jewish descent: one of them a key figure in Cold War diplomacy and winner of the Nobel Peace Prize, the other a top businessman - two lives which are exemplars of the American dream. When Henry was born in 1923 and Walter in 1924 the Kissingers had for decades been part of a flourishing Jewish middle class in Furth, a market town in northern Bavaria. Evi Kurz describes the gradual but remorseless destruction of this community in the 1930s; the Kissinger family's decision to flee to London and then New York in 1938; the war years in America; and the hugely successful careers in postwar America of

both brothers, who always remembered their home and roots in a small German town. *High Hearts* Springer Science & Business Media

This volume presents information on both the basic and clinical aspects of sphingolipid-metabolizing enzymes in various cancers. The volume also includes discussions of the innovative techniques and approaches for quantitative analysis and imaging that could significantly impact the general understanding of this topic, and the potential benefit of targeting sphingolipid enzymes to develop novel cancer therapeutics. As well, the volume includes a critical examination of the specific pathways and pathobiologies associated with the

altered regulation of sphingolipid metabolism as a contributor to the development and/or maintenance of pathological conditions such as cancer.

A kitchen is no different from most science laboratories and cookery may properly be regarded as an experimental science. Food preparation and cookery involve many processes which are well described by the physical sciences. Understanding the chemistry and physics of cooking should lead to improvements in performance in the kitchen. For those of us who wish to know why certain recipes work and perhaps more

importantly why others fail, appreciating the underlying physical processes will inevitably help in unravelling the mysteries of the "art" of good cooking. Strong praise from the reviewers - "Will be stimulating for amateur cooks with an interest in following recipes and understanding how they work. They will find anecdotes and, sprinkled throughout the book, scientific points of information... The book is a pleasant read and is an invitation to become better acquainted with the science of cooking." - NATURE "This year, at last, we have a book which shows how a practical understanding of physics and chemistry can improve culinary

performance... [Barham] first explains, in a lucid non-textbooky way, the principles behind taste, flavour and the main methods of food preparation, and then gives fool-proof basic recipes for dishes from roast leg of lamb to chocolate soufflé." - FINANCIAL TIMES WEEKEND "This book is full of interesting and relevant facts that clarify the techniques of cooking that lead to the texture, taste and aroma of good cuisine. As a physicist the author introduces the importance of models in preparing food, and their modification as a result of testing (tasting)."- THE PHYSICIST "Focuses quite specifically on the physics and food chemistry of practical domestic cooking in

terms of real recipes... Each chapter starts with an overview of the scientific issues relevant to that food group, e.g. toughness of meat, thickening of sauces, collapse of sponge cakes and soufflés. This is followed by actual recipes, with the purpose behind each ingredient and technique explained, and each recipe followed by a table describing some common problems, causes and solutions. Each chapter then ends with suggested experiments to illustrate some of the scientific principles exploited in the chapter." - FOOD & DRINK NEWSLETTER

After the death of her

parents, young Andrina Maldon has selflessly borne the responsibility not only for the running a household impoverished by her father's profligacy but also for the future happiness of her two sisters. Strikingly beautiful as they are, there is no hope of their finding a suitable suitor without someone to introduce them to the Social world. So she travels unchaperoned to London to seek the assistance of the Duke of Broxbourne, her father's friend and the Godfather she has never met. On the stagecoach journey Andrina has a frightening encounter with a gentleman at a Posting inn and on arrival at Broxbourne House she is appalled to find that this man is

none other than the Duke of Broxbourne himself. At first unwilling to help her, the Duke grudgingly agrees to her requests and although grateful, Andrina despises this arrogant and insensitive man. Until, little by little, his true nature is revealed and a very different emotion begins to stir in her heart.

The first edition of this manual appeared in 1992 and was entitled ECAT Assay

Procedures. This completely revised new edition combines the strengths of the first edition with new and useful features. *Laboratory Techniques in Thrombosis - a Manual* still gives detailed descriptions of the recommended assays and their alternatives. However, the manual now has a broader scope because it is no longer limited by the frontiers of

ECAT. Experts all over the world have contributed to this edition. Furthermore, new assays have been introduced, improvements have been suggested for other assays, while a few others have become redundant or no longer available. The list of manufacturers is fully updated and a list of the recommended nomenclature of quantities in thrombosis and haemostasis is new to this edition, further facilitating the use of this manual. Laboratory Techniques in Thrombosis - a Manual will contribute to furthering the much needed harmonization and standardization of tests within the field and should have a place in all working

haemostasis laboratories. *Island Rivers* Workman Publishing Perception, Interaction and Language is essentially about the nature of adaptive learning in both its normal and abnormal forms. A major premise is that verbal and nonverbal learning depend critically on interaction with the environment via daily life problem solving activity. This new perspective is not entirely unfamiliar. But, a fundamentally new perspective is offered by the additional premise that tactile-kinesthetic perception associated with problem solving experiences provides the primary basis for interaction and hence, is the root of adaptive learning and de

velopment. Although decades have passed since Jean Piaget first proposed a model of cognitive learning and development that builds on sensorimotor processes, little seems to be known about how human actions are actually translated into adaptive behavior. We are keenly reminded of this lack of knowledge when dealing with persons who present abnormal performance. The failure to learn language, in particular, can create a devastating handicap. Therefore, it is not surprising that systematic attention has been given to research and clinical programs for the language disordered. *Ammachi* M. A. Center Anthropologists have written a great deal about the coastal

adaptations and seafaring traditions of Pacific Islanders, but have had much less to say about the significance of rivers for Pacific island culture, livelihood and identity. The authors of this collection seek to fill that gap in the ethnographic record by drawing attention to the deep historical attachments of island communities to rivers, and the ways in which those attachments are changing in response to various forms of economic development and social change. In addition to making a unique contribution to Pacific island ethnography, the authors of this volume speak to a global set of issues of immense importance to a world in which water scarcity, conflict, pollution and

the degradation of riparian environments afflict growing numbers of people. Several authors take a political ecology approach to their topic, but the emphasis here is less on hydro-politics than on the cultural meaning of rivers to the communities we describe. How has the cultural significance of rivers shifted as a result of colonisation, development and nation-building? How do people whose identities are

fundamentally rooted in their relationship to a particular river renegotiate that relationship when the river is dammed to generate hydro-power or polluted by mining activities? How do blockages in the flow of rivers and underground springs interrupt the intergenerational transmission of local ecological knowledge and hence the ability of local communities to construct collective identities rooted in a sense of place?
