As global temperatures rise under the forcing hand of humanity's greenhouse gas emissions, new questions are being asked of how societies make sense of their weather, of the cultural values, which are afforded to climate, and of how environmental futures are imagined, feared, predicted, and remade. Weather, Climate, and Geographical Imagination contributes to this conversation by bringing together a range of voices from

history of science, historical geography, and environmental history, each speaking to a set of questions about the role of space and place in the production, circulation, reception, and application of knowledges about weather and climate. The volume develops the concept of "geographical imagination" to address the intersecting forces of scientific knowledge, cultural politics, bodily experience, and spatial imaginaries, which shape the history of knowledges about climate. Annotation American Empire challenges our deepest assumptions about the rise of American globalism in the twentieth century and puts geography back into the

History of what is called the American Century.

American Empire Oxford : Blackwell
"Education for Empire examines how American public schools created and placed children on multiple and uneven paths to "good citizenship." These paths offered varying kinds of subordination and degrees of exclusion closely tied to race, national origin, and US imperial ambitions. Public school administrators, teachers, and textbook authors grappled with how to promote and share in the potential benefits of commercial and territorial expansion, and in both territories and states, how to apply colonial forms of governance to the young populations they professed to prepare for varying future

citizenships. The book brings together subjects in American history usually treated separately--in particular the formation and expansion of public schools and empire building both at home and abroad. Temporally framed by the 1882 Chinese Exclusion and 1924 National Origins Acts, two pivotal immigration laws deeply entangled in and telling of US quests for empire, case studies in California, Hawaii, Georgia, New York, the Southwest, and Puerto Rico reveal that marginalized people contested, resisted, and blazed alternative paths to citizenship, in effect destabilizing the boundaries that white nationalists, including many public school officials, in the United States and other self-described "white men's countries" worked so hard to create and maintain"--Provided by publisher.

Charles Withers' book brings together work on the history of geography and the history of science with extensive archival analysis to explore how geographical knowledge has been used to shape an understanding of the nation. Using Scotland as an exemplar, the author

places geographical knowledge in its wider intellectual context to afford insights into perspectives of empire, national identity and the geographies of science. In so doing, he advances a new area of geographical enquiry, the historical geography of geographical knowledge, and demonstrates how and why different forms of geographical knowledge have been used in the past to constitute national identity, and where those forms were constructed and received. The book will make an important contribution to the study of nationhood and empire and will therefore interest historians, as well as students of historical geography and historians of science. It is theoretically engaging, empirically rich and beautifully illustrated.

Geography in America at the Dawn of the 21st Century Simon and Schuster
 Tropicality is a centuries-old Western discourse that treats otherness and the exotic in binary - 'us' and 'them' - terms. It has long been implicated in empire and its anxieties over difference. However, little attention has been paid to its twentieth-century genealogy. This book explores this neglected history through

the work of Pierre Gourou, one of the century's foremost purveyors of what anti-colonial writer Aimé Césaire dubbed tropicalité. It explores how Gourou's interpretations of 'the nature' of the tropical world, and its innate difference from the temperate world, were built on the shifting sands of twentieth-century history - empire and freedom, modernity and disenchantment, war and revolution, culture and civilisation, and race and development. The book addresses key questions about the location and power of knowledge by focusing on Gourou's cultivation of the tropics as a romanticised, networked and affective domain. The book probes what Césaire described as Gourou's 'impure and worldly geography' as a way of opening up interdisciplinary questions of geography, ontology, epistemology, experience and materiality. This book will be of great interest to scholars and students within historical geography, history, postcolonial studies, cultural studies and international relations.

The Shaping of America: A Geographical Perspective on 500 Years of History Yale University Press

This volume explores the spatial framework of Herodotus' Histories, the Greek historian's account of Persian imperialism in the sixth and fifth century BC and its culmination in a series of grand expeditions against Greece itself. Focusing on his presentation of the natural world through careful geographical descriptions, ranging from continents and river and mountain networks on a vast scale down to the local settings for individual episodes, it also examines how these landscapes are charged with greater depth and resonance through Herodotus' use of mythological associations and spatial parallels. Man's interaction with, and alteration of, the physical world of the Histories adds another critical dimension to the meaning given to space in Herodotus' work, as his subjects' own agency serves to transform their geography from a neutral backdrop into a resonant landscape with its own role to play in the narrative, in turn reinforcing the placing of the protagonists along a spectrum of positive or negative characterizations. The Persian imperial bid may thus be seen as a war on nature, no less than on their intended subjects:

however, as Herodotus reflects, Greece itself is waiting in the wings with the potential to be no less abusive an imperial power. Although the multi-vocal nature of the narrative complicates whether we can identify a 'Herodotean' world at all, still less one in which moral judgements are consistently cast, the fluid and complex web of spatial relationships revealed in discussion nevertheless allows focalization to be brought productively into play, demonstrating how the world of the Histories may be viewed from multiple perspectives. What emerges from the multiple worlds and world-views that Herodotus creates in his narrative is the mutability of fortune that allows successive imperial powers to dominate: as the exercise of political power is manifested both metaphorically and literally through control over the natural world, the map of imperial geography is constantly in flux.

Before the nineteenth century, travellers who left Britain for the Americas, West Africa, India and elsewhere encountered a medical conundrum: why did they fall ill when they arrived, and why – if they recovered – did they never become so ill again? The widely accepted answer was that the newcomers needed to become 'seasoned to the climate.' Suman Seth explores forms of eighteenth-century medical knowledge, including conceptions of seasoning, showing how geographical location was essential to this knowledge and helped to define relationships between Britain and her far-flung colonies. In this period, debates raged between medical practitioners over whether diseases changed in different climes. Different diseases were deemed characteristic of different races and genders, and medical practitioners were thus deeply involved in contestations over race and the legitimacy of the abolitionist cause. In this innovative and engaging history, Seth offers dramatically new ways

to understand the mutual shaping of medicine, race, and empire.

Rethinking Development Geographies
Springer

"Fascinating.... Lays a foundation for understanding human history."—Bill Gates
In this "artful, informative, and delightful" (William H. McNeill, *New York Review of Books*) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and then developed religion --as well as nasty germs and potent weapons of war --and adventured on sea and land to conquer and decimate preliterate cultures. A major advance in our understanding of human societies, *Guns, Germs, and Steel* chronicles the way that the modern world came to be and stunningly dismantles racially based theories of human history. Winner of the Pulitzer Prize, the Phi Beta Kappa Award in Science, the Rhone-Poulenc Prize, and the Commonwealth Club of California's Gold Medal.

Volume one examines how an immense diversity of ethnic and religious groups ultimately created a set of distinct regional societies. Volume two emphasizes the flux, uncertainty, and unpredictability of the expansion into continental America, showing how a multitude of individuals confronted complex and problematic issues.

Development as a concept is notoriously imprecise, vague and presumptuous. Struggles over the meaning of this fiercely contested term have had profound implications on the destinies of people and places across the globe. *Rethinking Development Geographies* offers a stimulating and critical introduction to the study of geography and development. In doing so, it sets out to explore the spatiality of development thinking and practices. The book highlights the geopolitical nature of development and its origins in Empire and the Cold War. It also reflects critically on the historical engagement of geographers with 'the Tropics', the 'Third World' and the 'South'. The dominant economic and political

philosophies that shape the policies and perspectives of major institutions are discussed. The interconnections between globalization and development are highlighted through an examination of local, national and transnational resistance to various forms of development. The text provides an accessible introduction to the complex and confusing world of contemporary global development. Informative diagrams, cartoons and case studies are used throughout. While exploring global geographies of economic and political change *Rethinking Development Geographies* is also grounded in a concern with people and places, the 'view from below', the views of women and the view from the 'South'.

How did the major European imperial powers and indigenous populations experience imperialism and colonisation in the period 1880-1960? In this richly-illustrated comparative account, Robin Butlin provides a comprehensive overview of the experiences of individual European imperial powers - British, French, Dutch, Spanish, Portuguese, Belgian, German and Italian - and the reactions of indigenous peoples. He explores the complex

processes and discourses of colonialism, conquest and resistance from the height of empire through to decolonisation and sets these within the dynamics of the globalisation of political and economic power systems. He sheds new light on variations in the timing, nature and locations of European colonisations and on key themes such as exploration and geographical knowledge; maps and mapping; demographics; land seizure and environmental modification; transport and communications; and resistance and independence movements. In so doing, he makes a major contribution to our understanding of colonisation and the end of empire.

From the author of the New York Times bestseller *Prisoners of Geography*, a fascinating, "refreshing, and very useful" (The Washington Post) follow-up that uses ten maps to explain the challenges to today's world powers and how they presage a volatile future. Tim Marshall's global bestseller *Prisoners of Geography* offered us a "fresh way of looking at maps" (The New York Times Book Review), showing how every nation's choices are limited by mountains, rivers, seas, and walls. Since then, the geography hasn't changed, but the world has. Now, in this "wonderfully entertaining and lucid account, written with wit, pace, and clarity" (Mirror, UK), Marshall takes us into ten regions set to shape global politics. Find out why US interest in the Middle East will wane; why Australia is now beginning an epic contest with China; how Turkey, Saudi Arabia, and the UK are cleverly

positioning themselves for greater power; why Ethiopia can control Egypt; and why Europe's next refugee crisis looms closer than we think, as does a cutting-edge arms race to control space. Innovative, compelling, and delivered with Marshall's trademark wit and insight, this is "an immersive blend of history, economics, and political analysis that puts geography at the center of human affairs" (Publishers Weekly).

Spatial Histories of Radical Geography Routledge

A Historical Geography of Europe provides an analytical and explanatory account of European historical geography from classical times to the modern period, including the vast changes to landscape, settlements, population, and in political and cultural structures and character that have taken place since 1500. The text takes account of the volume of relevant research and literature that has been published over the past two or three decades, in order to achieve a coverage and synthesis of this very broad range of evidence and opinion, and has tried to engage with many of the main themes and debates to give a clear indication of

changing ideas and interpretations of the subject.

"The editors of this genuinely brilliant book seem to dare the reader to argue with them from the first page... I would encourage everyone interested in cultural geography, or in the cultural turn within a whole set of human geographies, to do likewise." --ANNALS OF THE ASSOCIATION OF AMERICAN GEOGRAPHERS "A richly plural and impassioned re-presentation of cultural geography that eschews everything in the way of boundary drawing and fixity. A re-visioning of the field as "a set of engagements with the world," it contains a vibrant atlas of ever shifting possibilities. Throbbing with commitment, and un-disciplined in the most positive sense of that term, it is exactly what a handbook ought to be." --Professor Allan Pred Department of Geography, University of California at Berkeley Ten sections, with a detailed editorial introduction, the Handbook of Cultural Geography presents a comprehensive statement of the relation between the cultural imagination and the

geographical imagination. Emphasising the intellectual diversity of the discipline, the Handbook is a textured overview that presents a state-of-the-art assessment of the key questions informing cultural geography, while also looking at resonances between cultural geography and other disciplines.

Geographical Thought provides a clear and accessible introduction to the key ideas and figures in human geography. The book provides an essential introduction to the theories that have shaped the study of societies and space. Opening with an exploration of the founding concepts of human geography in the nineteenth century academy, the authors examine the range of theoretical perspectives that

have emerged within human geography over the last century from feminist and marxist scholarship, through to post-colonial and non-representational theories. Each chapter contains insightful lines of argument that encourage readers towards independent thinking and critical evaluation. Supporting materials include a glossary, visual images, further reading suggestions and dialogue boxes.
