In *Morpho: Hands and feet*, artist and teacher Michel Lauricella presents a unique approach to learning to draw the human body. In this book, Lauricella focuses exclusively on the hands and feet--arguably the most popular and, for many, the most challenging parts of the body to draw successfully. Breaking the subject matter down into the underlying skeletal shapes, followed by the musculature, then skin and fat, and finally, the veins, Lauricella offers multiple approaches--from simple forms to complex renderings--and a plethora of positions and gestures are included to help you improve your drawing skills. Geared toward artists of all levels, from beginners through professionals, this handy, pocket-sized book will help spark your imagination and creativity. (Publisher's Note: This book features an "exposed" binding style. This is intentional as it is designed to help the book lay flat as you draw.)

George Brant Bridgman (1865-1943) was a Canadian-American painter, writer, and teacher in the fields of anatomy and figure drawing. Bridgman taught anatomy for artists at the Art Students League of New York for some 45 years. *Constructive Anatomy: Illustrated* by George B. Bridgman. Excellent book of anatomical drawing instruction. Ideal for beginning to intermediate artists, begins with instruction on drawing hands and works its way through the human body giving detailed instruction on how to draw realistic human figures. The drawings that are presented here show the conceptions that have proved simplest and most

effective in constructing the human figure. The eye in drawing must follow a line or a plane or a mass. In the process of drawing, this may become a moving line, or a moving plane, or a moving

mass. The line, in actual construction, must come first; but as mental construction must precede physical, so the concept of mass must come first, that of plane second, that of line last. Masses of about the same size or proportion are conceived not as

masses, but as one mass; those of different proportions, in respect to their movement, are conceived as wedging into each other, or as morticed or interlocking.
