Engineering Graphics Essentials with AutoCAD 2014 Instruction gives students a basic understanding of how to create and read engineering drawings by presenting principles in a logical and easy to understand manner. It covers the main topics of engineering graphics, including tolerancing and fasteners while also teaching them the fundamentals of AutoCAD 2014. This book features an independent learning disc containing supplemental content to further reinforce these principles. Through its many different exercises this text is designed to encourage students to interact with the instructor during lectures, and it will give students a superior understanding of engineering graphics and AutoCAD. The enclosed independent learning disc allows the learner to go through the topics of the book independently. The main content of the disc contains pages that summarize the topics covered in the book. Each page has voice over content that

simulates a lecture environment. There are also interactive examples that allow the learner to go through the instructor led and in-class student exercises found in the book on their own. Video examples are also included to supplement the learning process.

When archaeologist Howard Carter saw gold gleaming in a dark chamber he excavated in Egypt in 1922, he knew he had found the pharaoh Tutankhamun's tomb. People around the world eagerly read newspaper accounts of the discovery. Yet the story had a dark side. Numerous deaths connected to the find prompted rumors of a curse. Throughout the pages of this captivating tale, readers will play the roles of Egyptologist, historian, and detective as they examine the facts of the curious events surrounding the excavation of King Tut's tomb.

Concurrent Engineering (CE) is based on the premise that different phases of a product's lifecycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). It has become the substantive basic methodology in many industries, including automotive, aerospace, machinery, shipbuilding, consumer goods, process industry and environmental engineering. CE aims to increase the efficiency of the PCP and reduce errors in later phases while incorporating considerations for full lifecycle and through-life operations. This book presents the proceedings of the 22nd ISPE Inc. (International Society for Productivity Enhancement) International Conference on Concurrent

Engineering (CE2015) entitled 'Transdisciplinary Lifecycle Analysis of Systems', and held in Delft, the Netherlands, in July 2015. It is the second in the series 'Advances in Transdisciplinary Engineering'. The book includes 63 peer reviewed papers and 2 keynote speeches arranged in 10 sections: keynote speeches; systems engineering; customization and variability management; production oriented design, maintenance and repair; design methods and knowledge-based engineering; multidisciplinary product management; sustainable product development; service oriented design; product lifecycle management; and trends in CE. Containing papers ranging from the theoretical and conceptual to the highly pragmatic, this book will be of interest to all engineering professionals and practitioners; researchers, designers and educators.

Filling the need for a reference that explains the behavior of power electronic converters, this book provides information currently unavailable in similar texts on power electronics. Clearly organized into four parts, the first treats the dynamics and control of conventional converters, while the second part covers the dynamics and control of DC-DC converters in renewable energy applications, including an introduction to the sources as well as the design of current-fed converters applying duality-transformation

methods. The third part treats the dynamics and control of three-phase rectifiers in voltage-sourced applications, and the final part looks at the dynamics and control of three-phase inverters in renewable-energy applications. With its future-oriented perspective and advanced, first-hand knowledge, this is a prime resource for researchers and practicing engineers needing a ready reference on the design and control of power electronic converters.

This account of historical politics in Ukraine, framed in a broader European context, shows how social, political, and cultural groups have used and misused the past from the final years of the Soviet Union to 2020. Georgiy Kasianov details practices relating to history and memory by a variety of actors, including state institutions, non-governmental organizations, political parties, historians, and local governments. He identifies the main political purposes of these practices in the construction of nation and identity, struggles for power, warfare, and international relations. Kasianov considers the Ukrainian case in the context of a global increase in the politics of history and memory, with particular emphasis on a distinctive East-European variety. He pays special attention to the use and abuse of history in relations between Ukraine, Russia, and Poland.

Tut is a nice young boy, one day on his way back home he found a wounded bird, so he carried it to his house in tenderness. The story is highlighting the importance of respecting birds which helps children to think differently. This educational series for children makes

them think positively about their everyday behaviors and can also encourage them to learn more about pharaonic life in ancient Egypt through an easy language and attractive pictures.

**Scalable Uncertainty Management** Princeton University Press

Organized by the periods, kingdoms, and empires generally used in ancient Near Eastern political history, *Ancient Near Eastern History and Culture* interlaces social and cultural history with a political narrative. Charts, figures, maps, and historical documents introduce the reader to the material world of the ancient Near East, including Egypt. The emphasis on historical debates and areas of uncertainty helps students understand how historians use evidence to create interpretations and that several different interpretations of history are possible. New features in this edition include: Reorganization of the chapters on the early periods, with discussions incorporating the latest archaeological finds. New "Debating the Evidence" sections discussing current controversial issues in Near Eastern history. These sections make it easy for students and teachers to find and use the portions of the text devoted to scholarly arguments about various aspects of ancient Near Eastern history. A new chapter, "Ancient Israel and Judah," has been added to cover more completely the crucial issues of ancient Israelite history and religion. More emphasis has been placed on the role and contributions of women in the ancient Near East. The most important change is the addition of co-author Susan N. Helft, a specialist in the art and archaeology of the ancient Near East, who has applied her considerable knowledge, insight, research, and editing

skills throughout the book. This new edition of *Ancient Near Eastern History and Culture* will remain a crucial text for students beginning to learn about the fascinating civilizations of the Near East. *Tut: The Story of My Immortal Life* SDC Publications

During my tenure with the Marine Corps Air Wing, and later, I often thought of what would have been the outcome, if during the Vietnam War, Marines fighter pilots were afforded the opportunity of air to air engagements as they were during World War I and II and the Korean War. Had that opportunity been realized, Marines may have very well been the first air Aces of the war. The Vietnam War had an impact that fueled the political revolution of the nineteen sixties and impacted our world of today. Those who made such an impact were those so affectionately referred to as the baby boomers. Some of these were men in their early twenties were taught to fly state of the art fighter aircraft and deliver bombs, rockets and napalm on the North Vietnamese and Viet Cong enemy. None more so than pilots and Flight officers of the United States Marine Corps Air Wing. I often recall a quote from President Ronald Reagan as he described Marines during a speech in 1985. "Some people spend an entire lifetime wondering if they've made a difference. The Marines don't have that problem."

**DIGITAL CITIES ROADMAP** This book details applications of technology to efficient digital city infrastructure and its planning, including smart buildings. Rapid urbanization, demographic changes, environmental changes, and new technologies are changing the views of urban leaders on sustainability, as well as creating and providing public

services to tackle these new dynamics. Sustainable development is an objective by which the processes of planning, implementing projects, and development is aimed at meeting the needs of modern communities without compromising the potential of future generations. The advent of Smart Cities is the answer to these problems. Digital Cities Roadmap provides an in-depth analysis of design technologies that lay a solid foundation for sustainable buildings. The book also highlights smart automation technologies that help save energy, as well as various performance indicators needed to make construction easier. The book aims to create a strong research community, to have a deep understanding and the latest knowledge in the field of energy and comfort, to offer solid ideas in the nearby future for sustainable and resilient buildings. These buildings will help the city grow as a smart city. The smart city has also a focus on low energy consumption, renewable energy, and a small carbon footprint. Audience The information provided in this book will be of value to researchers, academicians and industry professionals interested in IoT-based architecture and sustainable buildings, energy efficiency and various tools and methods used to develop green technologies for construction in smart cities.

A group of tourists crowds into a dusty room with brightly painted walls. They have entered King Tut's tomb! Priceless artifacts once filled every chamber of the tomb. Now they are in museums across the world, carrying on King Tut's legacy thousands of years after his death! This high-interest title uses vivid photographs, timelines, graphs, and profiles of important discoveries to

introduce readers to the fascinating world of this ancient Egyptian ruler.

In 1922, Howard Carter peered into Tutankhamun's tomb for the first time, the only light coming from the candle in his outstretched hand. Urged to tell what he was seeing through the small opening he had cut in the door to the tomb, the Egyptologist famously replied, "I see wonderful things." Carter's fabulous discovery is just one of the many spellbinding stories told in *Three Stones Make a Wall*. Written by Eric Cline, an archaeologist with more than thirty seasons of excavation experience, this book traces the history of archaeology from an amateur pursuit to the cutting-edge science it is today by taking the reader on a tour of major archaeological sites and discoveries. Along the way, it addresses the questions archaeologists are asked most often: How do you know where to dig? How are excavations actually done? How do you know how old something is? Who gets to keep what is found? Taking readers from the pioneering digs of the eighteenth century to today's exciting new discoveries, *Three Stones Make a Wall* is a lively and essential introduction to the story of archaeology.

This book highlights several gaps that have not been addressed in existing cyber security research. It first discusses the recent attack prediction techniques that utilize one or more aspects of information to create attack prediction models. The second part is dedicated to new trends on information fusion and their applicability to cyber security; in particular, graph data analytics for cyber security, unwanted traffic detection and control based on trust management

software defined networks, security in wireless sensor networks & their applications, and emerging trends in security system design using the concept of social behavioral biometric. The book guides the design of new commercialized tools that can be introduced to improve the accuracy of existing attack prediction models. Furthermore, the book advances the use of Knowledge-based Intrusion Detection Systems (IDS) to complement existing IDS technologies. It is aimed towards cyber security researchers.

As archaeologist Howard Carter cut his way into an underground chamber on November 26, 1922, he was overcome with excitement. When Carter finally peered through the tiny hole he had made, he could not believe his eyes. What incredible treasures would he find inside King Tutankhamen's tomb? And how had the tomb remained undiscovered for more than 3,000 years?

This book highlights a set of selected, revised and extended papers from the 7th International Conference on Simulation and Modeling Methodologies, Technologies and Applications (SIMULTECH 2017), held in Madrid, Spain, on July 26 to 28, 2017. The conference brought together researchers, engineers and practitioners whose work involves methodologies in and applications of modeling and simulation. The papers showcased here represent the very best papers from the Conference, and report on a broad range of new and innovative solutions.

Addresses recent advances from both the clinical and technological

perspectives to provide a comprehensive presentation of m-Health This book introduces the concept of m-Health, first coined by Robert S. H. Istepanian in 2003. The evolution of m-Health since then—how it was transformed from an academic concept to a global healthcare technology phenomenon—is discussed. Afterwards the authors describe in detail the basics of the three enabling scientific technological elements of m-Health (sensors, computing, and communications), and how each of these key ingredients has evolved and matured over the last decade. The book concludes with detailed discussion of the future of m-Health and presents future directions to potentially shape and transform healthcare services in the coming decades. In addition, this book:

- Discusses the rapid evolution of m-Health in parallel with the maturing process of its enabling technologies, from bio-wearable sensors to the wireless and mobile communication technologies from IOT to 5G systems and beyond
- Includes clinical examples and current studies, particularly in acute and chronic disease management, to illustrate some of the relevant medical aspects and clinical applications of m-Health
- Describes current m-Health ecosystems and business models
- Covers successful applications and deployment examples of m-Health in various global health settings, particularly in developing countries

Every new and groundbreaking archaeological discovery refines our understanding of human history. This title examines the exploration and study of King Tut's tomb. The book explores the tomb's creation, traces its discovery and scientific investigation, and discusses future study and conservation

efforts. Well-placed sidebars, vivid photos, helpful maps, and a glossary enhance readers' understanding of the topic. Additional features include a table of contents, a selected bibliography, source notes, and an index, plus a timeline and essential facts. Aligned to Common Core standards and correlated to state standards. Essential Library is an imprint of Abdo Publishing, a division of ABDO.

Readers of this work will find examinations of the current status and future status for energy sources and technologies, their environmental interactions and the relevant global energy policies. The work begins with an overview of Energy Technologies for a Sustainable Future, which examines the correlation between population, economy and energy consumption in the past, and reviews the conventional and renewable energy sources as well as the management of them to sustain the ever-growing energy demand in the future. The rest of the chapters are divided into 3 parts; the first part of the book, "Energy Sources, Technologies and Environment", consists of 12 chapters, which include research on new energy technologies and evaluation of their environmental effects. The second part "Advanced Energy Materials" includes 7 chapters devoted to research on material science for new energy technologies. The final section titled "Energy Management, Economics and Policy" is comprised of 10 chapters about planning, controlling and monitoring energy related processes together with the policies to satisfy the needs of increasing population and growing economy. The chapters are selected works from the International

Conference on Energy and Management, which was organized by Istanbul Bilgi University Department of Energy Systems Engineering and PALMET Energy to share the knowledge on the

recent trends, scientific developments, innovations and management methods in energy, and held on 5-7th June 2014 at Istanbul Bilgi University.
