MAYRA KIMBERLY

Introduction to Migration
Studies Bloomsbury
Publishing

There are now more than three hundred city-regions around the world with populations greater than one million. These city-regions are expanding vigorously, and they present many new and deep challenges to researchers and policy-makers in both the more developed and less developed parts of the world. The processes of global economic integration and accelerated urban growth make traditional planning and policy strategies in these regions increasingly inadequate, while more

effective approaches remain largely in various stages of hypothesis and experimentation. 'Global City-Regions' represents a multifaceted effort to deal with the many different issues raised by these developments. It seeks at once to define the question of global city-regions and to describe the internal and external dynamics that shape them; it proposes a theorization of global city-regions based on their economic and political responses to intensifying levels of globalization; and it offers a number of policy insights into the severe social problems that confront global city-regions as they come face to face with an economically and politically neoliberal

world. At a moment when globalization is increasingly subject to critical scrutiny in many different quarters, this book provides a timely overview of its effects on urban and regional development, one of its most important (but perhaps least understood) corollaries. The book also offers a series of nuanced visions of alternative possible futures. *Mapping Urban Practices Through Mobile Phone Data* WIT Press
Exploration of the ways in which these groups of young people, marked by economic disadvantage and ethnic and religious diversity, have sought to navigate a new urban terrain and, in so doing, have come to see themselves in new

ways."--Jacket
Cities in a World Economy
 Universidad de Deusto
 Drawing on the experience of several cities from different parts of the world, this text provides a global perspective on the urbanization phenomenon and tall building development, and examines their underlying logic, design drivers, contextual relationships and pitfalls.

The Theoretical and Practical Dimensions of Regionalism in East Asia
 Elsevier

After two decades of evolution and transformation, London had become one of the most open and cosmopolitan cities in the world. The success of the 2012 Olympics set a high water-mark in the visible success of the city, while its influence and soft power increased in the global systems of trade, capital, culture, knowledge, and communications. The Making of a World City: London 1991 - 2021 sets out in clear detail both the catalysts that have enabled London to succeed and also the qualities and underlying values that are at play: London's openness and self-confidence, its

inventiveness, influence, and its entrepreneurial zeal. London's organic, unplanned, incremental character, without a ruling design code or guiding master plan, proves to be more flexible than any planned city can be. Cities are high on national and regional agendas as we all try to understand the impact of global urbanisation and the re-urbanisation of the developed world. If we can explain London's successes and her remaining challenges, we can unlock a better understanding of how cities succeed.

Beyond the Global City
 Sage Publications Pvt. Limited

This report presents the outcomes of a survey project of the National Academy of Economic Strategy of the Chinese Academy of Social Sciences and the United Nations Human Settlements Programme. The project evaluated and ranked the competitiveness of 1,007 global cities, with a combined population of over 500,000, based on a number of selected indicators. The report provides an overview of the global urbanization pattern and areas of improvements in the

selected cities. The outcomes of the project confirm that the formation and changes of global value chains have caused profound changes in economic structures in some countries and affected the development of cities in these countries, thereby reshaping the city planet. In addition to comparative analysis of competitiveness of cities, this report also sheds light on the global pattern and trends of economic and human development. It reveals four new findings regarding the development of cities around the world: First, over the past four decades, human societies are transitioning quickly from agricultural societies which are characterized by scattered settlements to industrial societies which are characterized by city clusters, interconnectivity, and resource sharing. The planet where we are living has become a city planet. Second, globalization and the advancements of smart and networking technologies have accelerated urbanization across the world in the past four decades. Third, cities are becoming increasingly metropolitan, interconnected, and

smart. Fourth, sustainability scores of the selected global cities show olive-shaped distribution on the world map and sustainability performance of Asia cities has improved continuously.

The Global Cities

Reader Springer
Global Cities, Local Streets: Everyday Diversity from New York to Shanghai, a cutting-edge text/ethnography, reports on the rapidly expanding field of global, urban studies through a unique pairing of six teams of urban researchers from around the world. The authors present shopping streets from each city – New York, Shanghai, Amsterdam, Berlin, Toronto, and Tokyo – how they have changed over the years, and how they illustrate globalization embedded in local communities. This is an ideal addition to courses in urbanization, consumption, and globalization.. The book's companion website, www.globalcitieslocalstreets.org, has additional videos, images, and maps, alongside a forum where students and instructors can post their own shopping street experiences.

Global City Regions John Wiley & Sons
The world's urban population now exceeds the world's rural population. What does this mean for the state of our cities, given the strain this global demographic shift is placing upon current urban infrastructures? Following on from previous State of the World's Cities reports, this edition uses the framework of 'The Urban Divide' to analyze the complex social, political, economic and cultural dynamics of urban environments. In particular, the book focuses on the concept of the 'right to the city' and ways in which many urban dwellers are excluded from the advantages of city life, using the framework to explore links among poverty, inequality, slum formation and economic growth. The volume will be essential reading for all professionals and policymakers in the field, as well as a valuable resource for researchers and students in all aspects of urban development. Published with UN-Habitat.

The Future of the City

Routledge
Peter Taylor's compelling insights challenge us to

view cities as part of a global network, divorced from the constraints of national or even regional boundaries.

Smart Cities: Issues and Challenges Springer
Nature

Smart Cities: Issues and Challenges: Mapping Political, Social and Economic Risks and Threats serves as a primer on smart cities, providing readers with no prior knowledge on smart cities with an understanding of the current smart cities debates. Gathering cutting-edge research and insights from academics, practitioners and policymakers around the globe, it identifies and discusses the nascent threats and challenges contemporary urban areas face, highlighting the drivers and ways of navigating these issues in an effective manner. Uniquely providing a blend of conceptual academic analysis with empirical insights, the book produces policy recommendations that boost urban sustainability and resilience. Combines conceptual academic approaches with empirically-driven insights and best practices Offers new approaches and arguments from inter and

multi-disciplinary perspectives Provides foundational knowledge and comparative insight from global case-studies that enable critical reflection and operationalization Generates policy recommendations that pave the way to debate and case-based planning

Global City Regions SAGE Publications

A unique comparative study based on funded research, of eleven city regions across three continents looking at changes over the last 30 years. Detailed changes in land use are presented here with series of maps prepared especially for the study. The socio-economic and physical forms of city regions have been examined for comparative study and the findings will be of interest to all those concerned with urban development in their professional and academic work. The book features numerous maps which underline research findings. Cities covered are: Ankara, Bangkok, Boston, Madrid, Randstad, San Diego, Chile, Sao Paulo, Seattle and the Central Puget, Taipei, Tokyo, West Midlands.

The Other Global City Routledge

Since the mid-1990s, research on global cities has exploded throughout the social sciences. It has now become one of the most exciting, if controversial, approaches to the study of urban life today.

The Routledge Handbook of Spanish in the Global City Routledge

This is the first book to explore how religious movements and actors shape and are shaped by aspects of global city dynamics. Theoretically grounded and empirically informed, *Religion and the Global City* advances discussions in the field of urban religion, and establishes future research directions. David Garbin and Anna Strhan bring together a wealth of ethnographically rich and vivid case studies in a diversity of urban settings, in both Global North and Global South contexts. These case studies are drawn from both 'classical' global cities such as London and Paris, and also from large cosmopolitan metropolises - such as Bangalore, Rio de Janeiro, Lagos, Singapore and Hong Kong - which all constitute, in their own terms, powerful sites within the informational, cultural and moral

networked economies of contemporary globalization. The chapters explore some of the most pressing issues of our times: globalization and the role of global neo-liberal regimes; urban change and in particular the dramatic urbanization of Global South countries; and religious politics and religious revivalism associated, for instance, with transnational Islam or global Pentecostal/Charismatic Christianity.

Global Industry Chains: Creating a Networked City Planet Routledge

The pivotal nodes in the world city network are global cities---cities of supreme strategic value in global economy and politics, science and technology, culture, and society. *Global Cities: Past, Present and Future* explores the evolution of global cities---their formation, rise, development and tendencies. This book summarizes and interprets global tendencies and also puts forward a theoretical framework that will help researchers understand these cities better. It also makes a compelling case for understanding every city in terms of evolutionary dynamics.

The first eight chapters of the book discuss the ontology of global city evolution and patterns, forms and trends of development. The last two chapters study the case of Shanghai, which aims to build itself into an important global city by 2050. This case study illustrates the shaping of a new type of global city that demonstrates new characteristics of the globalized space.

Global Cities, Local Streets Princeton

University Press
Based on funded research of 13 city regions across three continents, this comparative study looks at changes in land use since 1970. The socio-economic and physical forms of city regions have also been examined for comparative study.

Another Global City Routledge

This book provides a comprehensive overview of developments in East Asian regionalism, combining qualitative evidence with empirical quantitative analysis. It argues that two dominant processes have formed East Asian regionalism: 1) regionalization, and 2) inter-regionalism. Klecha-Tylec examines the differences between traditional and new

regionalisms as they apply to East Asia; the differences between East Asian and European regionalism; the role of the United States in shaping regional links; and the evolution of the three key structures of ASEAN, ASEAN+3, and Asia Summits. The book is unique for examining together the network, zonal, and geospatial dimensions of relations in East Asia as they apply at micro-regional, sub-regional, macro-regional, trans-regional and inter-regional levels. The book offers a detailed analysis of intra-regional links and the hybrid relationships between micro-regions and nation-states.

Global Cities and Climate Change John Wiley & Sons
Democracy, Citizenship and the Global City focuses on the controversial, neglected theme of citizenship. It examines the changing role of citizens; their rights, obligations and responsibilities as members of nation-states and the issue of accountability in a global society. Using this interdisciplinary approach, the book offers an innovative collection of work from Robert A. Beauregard, Anna Bounds, Janine Brodie,

Richard Dagger, Gerard Delanty, Judith A. Garber, Robert J. Holton, Warren Magnusson, Raymond Rocco, Nikolas Rose, Evelyn S. Ruppert, Saskia Sassen, Bryan S. Turner, John Urry, Gerda R. Wekerle and Nira Yuval-Davis.

Terrorism, Risk and the Global City Routledge
Cities have led the way to combat climate change by planning and implementing climate mitigation and adaptation policies. These local efforts go beyond national boundaries. Cities are forming transnational networks to enhance their understandings and practices for climate policies. In contrast to national governments that have numerous obstacles to cope with global climate change in the international and national level, cities have become significant international actors in the field of international relations and environmental governance. *Global Cities and Climate Change* examines the translocal relations of cities that have made an international effort to collectively tackle climate change. Compared to state-centric terms, international or trans-

local relations look at policies, politics, and interactions of local governments in the globalized world. Using multi-methods such as multi-level analysis, comparative case studies, regression analysis and network analysis, Taedong Lee illustrates why some cities participated in transnational climate networks for cities; under what conditions cities internationally cooperate with other cities, with which cities; and which factors influence climate policy performance. An essential read to all those who wish to understand the driving factors for local governments' engagement in global climate governance from a theoretical as well as practical point of view. Lee makes a valuable contribution to the fields of international relations, environmental policies, and urban studies.

State of the World's Cities

2010/2011 Springer
 Understanding worldwide gangs through the lens of globalization
Global Cities Routledge
 What is a Global City?
 Who authorizes the World Class City? This edited volume interrogates the "global cities" literature, which views the city as a shimmering, financial "global network." Through a historical-ethnographic exploration of inter-ethnic relations in the "other global" cities of Cairo, Beirut, Istanbul, Bukhara, Lhasa, Delhi, Singapore, Kuala Lumpur and Tokyo, the well-known contributors highlight cartographies of the Other Global City. The volume contends that thinking about the city in the longue duree and as part of a topography of interconnected regions contests both imperial and nationalist ways of reading cities that have occasioned the many and particularly violent

territorial partitions in Asia and the world.
[Global Research of Cities](#)
 Springer
 This book, written by the national think tank of China, presents a comprehensive analysis of the key elements and unique characteristics in Chengdu's development into a global city. To do so, it adopts both external and internal perspectives: externally, it highlights Chengdu's agglomeration and linkage so as to identify the differences in its overall development in comparison with other world cities. Internally, it explores the behavior of companies within the city as the root motive for urban development. The authors investigate how businesses grow and promote the agglomeration, linkage and diversity of cities in the growth process, helping readers understand the contribution of businesses to urban development.
