Human Geography for the AP® Course Yale University Press
 From the American Revolution to the end of World War II, the United States spent nineteen years at war against other nations. But since 1950, the total is twenty-two years and counting. On four occasions, U.S. presidents elected as "peace candidates" have gone on to lead the nation into ferocious armed conflicts. Repeatedly, wars deemed necessary when they began have been seen in retrospect as avoidable, and ill-advised. Americans profess to be a peace-loving people and one wary of "foreign entanglements." Yet we have been drawn into wars in distant lands from Vietnam to Afghanistan. We cherish our middle-class comforts and our children. Yet we send our troops to Fallujah and Mogadishu. How is it that ordinary Americans with the most to lose are so easily convinced to follow hawkish leaders-of both parties-into war? In *Reasons to Kill* noted scholar Richard E. Rubenstein explores both the rhetoric that sells war to the public and the underlying cultural and social factors that make it so effective. With unmatched historical perspective and insightful commentary, Rubenstein offers citizens new ways to think for themselves about crucial issues of war and peace.

Monografie over de laatste maanden in het leven van Stalin en de periode daarna.

An Introduction to Human Geography Perfection Learning
 The notion of bounded rationality was initiated in the 1950s by Herbert Simon; only recently has it influenced mainstream economics. In this book, Ariel Rubinstein defines models of bounded rationality as those in which elements of the process of choice are explicitly embedded. The book focuses on the challenges of modeling bounded rationality, rather than on substantial economic implications. In the first part of the book, the author considers the modeling of choice. After discussing some psychological findings, he proceeds to the modeling of procedural rationality, knowledge, memory, the choice of what to know, and group decisions. In the second part, he discusses the fundamental difficulties of modeling bounded rationality in games. He begins with the modeling of a game with procedural rational players and then surveys repeated games with complexity considerations. He ends with a discussion of computability constraints in games. The final chapter includes a critique by Herbert Simon of the author's methodology and the author's response. The Zeuthen Lecture Book series is sponsored by the Institute of Economics at the University of Copenhagen.

Resolving Structural Conflicts Routledge

Study, practice, rest. Repeat. *Human Geography for the AP® Course* by Hildebrandt et al, is perfectly aligned to College Board's APHG® course. It includes all course concepts with plentiful skills support and practice. A complete AP® Practice Exam rounds out the tools in this engaging book program.

Risk Up Front MIT Press

Neural Circuit and Cognitive Development, Second Edition, the latest release in the Comprehensive Developmental Neuroscience series, provides a much-needed update to underscore the latest research in this rapidly evolving field, with new section editors discussing the technological advances that are enabling the pursuit of new research on brain development. This volume is devoted mainly to anatomical and functional development of neural circuits and neural systems and cognitive development. Understanding the critical role these changes play in neurodevelopment provides the ability to explore and elucidate the underlying causes of neurodevelopmental disorders and their effect on cognition. This series is designed to fill the knowledge gap, offering the most thorough coverage of this field on the market today and addressing all aspects of how the nervous system and its components develop. Features leading experts in various subfields as section editors and article authors Presents articles that have been peer reviewed to ensure accuracy, thoroughness and scholarship Includes coverage of mechanisms that control the assembly of neural circuits in specific regions of the nervous system and multiple aspects of cognitive development

The Last Days of Stalin Academic Press

This best-selling brief introduction to public speaking offers practical coverage of every topic typically covered in a full-sized text, from invention, research and organization, practice and delivery, to the different speech types. Its concise, inexpensive format makes it perfect not only for the public speaking course, but also for any setting across the curriculum, on the job, or in the community. This newly redesigned full-color edition offers even stronger coverage of the fundamentals of speechmaking, while also addressing the changing realities of public speaking in a digital world. It features fully updated chapters on online presentations and using presentation software, and a streamlined chapter on research in print and online.

When Jesus Became God MIT Press

Provides critical evidenced based assessments and tools with which to investigate the role of rights abrogation in the health of populations.

Neural Circuit and Cognitive Development Bloomsbury Publishing USA

This textbook focuses on a set of skills-based learning outcomes common among undergraduate environmental programs. It covers critical scientific skills and ways of thinking that bridge the gap between the knowledge-based content of introductory environmental textbooks and the professional skills students of the environment need to succeed in both their academic programs and professional careers. This emphasis on skills is gaining more traction among academic programs across the country as they shift focus from knowledge delivery to learning outcomes and professional competencies. The book features clear methodological frameworks, engaging practice exercises, and a range of assessment case studies suitable for use across academic levels. For introductory levels, this text uses guided practice exercises to expose students to the skills they will need to master. At the capstone level, this text allows students to apply the knowledge they have gained to real-world issues and to evaluate their competency in key programmatic learning outcomes. A detailed answer key with rubrics customized for specific questions and sample answers at various competency levels is available to verified course instructors. Access to these answer key resources can be obtained by contacting the Springer Textbook Team at Textbooks@springer.com

Neurodevelopmental Disorders Test Prep Books

Trusted for its timeliness, readability, and sound pedagogy, *The Cultural Landscape: An Introduction to Human Geography* emphasizes the relevance of geographic concepts to human problems. The relationship between globalization and cultural diversity is woven throughout; Rubenstein addresses these themes with a clear organization and presentation that engages students and appeals to instructors. The Eleventh Edition focuses on issues of access and inequality to discuss negative trends (such as the economic downturn, depleting resources, and human-caused climate change) as well as positive steps taken (sustainability, technology, regime change, women's rights, and more). An updated design is optimized for eBooks and more

effective student learning. The cartography and photos are fully updated.

Models in Microeconomic Theory ('She' Edition) Academic Press
Cellular Migration and Formation of Neuronal Connections, Second Edition, the latest release in the Comprehensive Developmental Neuroscience series, presents the latest information on the genetic, molecular and cellular mechanisms of neural development. This book provides a much-needed update that underscores the latest research in this rapidly evolving field, with new section editors discussing the technological advances that are enabling the pursuit of new research on brain development. This volume focuses on the formation of axons and dendrites and cellular migration. Features leading experts in various subfields as section editors and article authors Presents articles that have been peer reviewed to ensure accuracy, thoroughness and scholarship Includes coverage of mechanisms which regulate the formation of axons and dendrites and cellular migration Covers neural activity, from cell-intrinsic maturation, to early correlated patterns of activity

The Palgrave Handbook of Radical Theology Springer

This book analyses how certain types of social systems generate violent conflict and discusses how these systems can be transformed in order to create the conditions for positive peace. *Resolving Structural Conflicts* addresses a key issue in the field of conflict studies: what to do about violent conflicts that are not the results of misunderstanding, prejudice, or malice, but the products of a social system that generates violent conflict as part of its normal operations. This question poses enormous challenges to those interested in conflict resolution, since the solution to this problem involves restructuring social, political, and cultural systems rather than just calling in a mediator to help people arrive at an agreement. This study breaks new ground in showing how local conflicts involving crime, police, and prisons; transnational conflicts involving religious terrorism by groups like ISIS; and international conflicts involving Great Power clashes are all produced in large part by elite-driven, exploitative or oppressive social structures. It also presents new ideas about the implications of this 'structural turn' for the practice of conflict resolution, emphasizing the need for conflict resolvers to embrace a new politics and to broaden their methods far beyond traditional forms of facilitation. Written by a leading scholar, this book will be of much interest to students of conflict resolution, peace studies, war and conflict studies, sociology, political science and international relations in general.

The Cultural Landscape Academic Press

A Course in Game Theory presents the main ideas of game theory at a level suitable for graduate students and advanced undergraduates, emphasizing the theory's foundations and interpretations of its basic concepts. The authors provide precise definitions and full proofs of results, sacrificing generalities and limiting the scope of the material in order to do so. The text is organized in four parts: strategic games, extensive games with perfect information, extensive games with imperfect information, and coalitional games. It includes over 100 exercises.

The Cultural Landscape Activities Bundle Simon and Schuster

It has long been argued that the Allies did little or nothing to rescue Europe's Jews. Arguing that this has been consistently misinterpreted, *The Myth of Rescue* states that few Jews who perished could have been saved by any action of the Allies. In his new introduction to the paperback edition, William Rubenstein

responds to the controversy caused by his challenging views, and considers further the question of bombing Auschwitz, which remains perhaps the most widely discussed alleged lost opportunity for saving Jews available to the Allies.

The World Book Encyclopedia Barrons Educational Services
 Polymer Physics provides an introduction to the field for upper level undergraduates and first year graduate students. Any student with a working knowledge of calculus, physics and chemistry should be able to read this book. The essential tools of the polymer physical chemist or engineer are derived in this book without skipping any steps.

This source book for teachers contains 105 bell-ringers, warm-ups, free-writes, individualized multimedia response forms and online activities for students to do in class or at home. They are aligned with the AP* Human Geography course in general and are organized around the Rubenstein 11th edition text in particular. Easy to use and full of entertaining and informative activities that reinforce the curriculum, procedural notes and answer key sections are included. Find TTT on FB, or click author name at the top of this page for all titles in this series, including Coursepak A for Rubenstein 12.

The Cultural Landscape Macmillan Higher Education

"[A] panoramic view of early Christianity as it developed against the backdrop of the Roman Empire of the fourth century" (Publishers Weekly). The story of Jesus is well known, as is the story of Christian persecutions during the Roman Empire. The history of fervent debate, civil strife, and bloody riots within the Christian community as it was coming into being, however, is a side of ancient history rarely described. Richard E. Rubenstein takes the reader to the streets of the Roman Empire during the fourth century, when a fateful debate over the divinity of Jesus Christ is being fought. Ruled by a Christian emperor, followers of Jesus no longer fear for the survival of their monotheistic faith. But soon, they break into two camps regarding the direction of their worship: Is Jesus the son of God and therefore not the same as God? Or is Jesus precisely God on earth and therefore equal to Him? The vicious debate is led by two charismatic priests. Arius, an Alexandrian priest and poet, preaches that Jesus, though holy, is less than God. Athanasius, a brilliant and violent bishop, sees any diminution of Jesus's godhead as the work of the devil. Between them stands Alexander, the powerful Bishop of

Alexandria, who must find a resolution that will keep the empire united and the Christian faith alive. With thorough historical, religious, and social research, Rubenstein vividly recreates one of the most critical moments in the history of religion. "A splendidly dramatic story . . . Rubenstein has turned one of the great fights of history into an engrossing story." —Jack Miles, *The Boston Globe*; author of *God: A Biography*

Worlds Without End Pearson

With recent studies using genetic, epigenetic, and other molecular and neurochemical approaches, a new era has begun in understanding pathophysiology of suicide. Emerging evidence suggests that neurobiological factors are not only critical in providing potential risk factors but also provide a promising approach to develop more effective treatment and prevention strategies. *The Neurobiological Basis of Suicide* discusses the most recent findings in suicide neurobiology. Psychological, psychosocial, and cultural factors are important in determining the risk factors for suicide; however, they offer weak prediction and can be of little clinical use. Interestingly, cognitive characteristics are different among depressed suicidal and depressed nonsuicidal subjects, and could be involved in the development of suicidal behavior. The characterization of the neurobiological basis of suicide is in delineating the risk factors associated with suicide. *The Neurobiological Basis of Suicide* focuses on how and why these neurobiological factors are crucial in the pathogenic mechanisms of suicidal behavior and how these findings can be transformed into potential therapeutic applications.

Verbal Behavior Macmillan

The Palgrave Handbook of Radical Theology is the definitive guide to radical theology and the commencement for new directions in that field. For the first time, radical theology is addressed and assessed in a single, comprehensive volume, including introductory and historical essays for the beginner, essays on major figures and their thought, and shorter articles on various themes, concepts, and related topics. This book is a seminal work for the radical theology movement. It clarifies origins and demonstrates the exigency and utility of current figures and issues. A useful and essential guide for newcomers and veterans in the field, this volume serves as both a reference work and an introduction to omitted or forgotten topics within contemporary discussions.
