In 2014, the federal government addressed the issue of student victimization through the expansion of Title IX. Every school district, college, and university receiving federal funding is accountable to reduce and ultimately eliminate sexual harassment and sexual violence in their settings. The requirements are extensive and apply to other forms of discrimination as well, and the consequences for noncompliance for students and schools are significant. Yet at this time, less than 1% of schools nationwide are in compliance, putting their students and their schools at additional risk. Ultimately, Title IX compliance will help both students and schools, and so will this book.

We define popular science as interpretations of scientific concepts in plain language (i.e., in nontechnical language) for the general audience, who may or may not have a background in science. Climate Change As popular Science (CCAPS) is a nontechnical interpretation of climate change science, intended for the general audience. We have a blog on this topic under the following web address: <https://climatechangepopulardiscourse.wordpress.com/> retrieved on October 23, 2016. We have posted most of the chapters in this book as CCAPS blog posts.

Foundations of Education Routledge
As in many small towns in the South, folks in Conway, South Carolina, fill the stands on fall Fridays to cheer on their local high school football squad. In 1989--with returning starter Carlos Hunt at quarterback and having finished with an 8-4 record in 1988--hopes were high that the beloved Tigers would win their first state championship. But during spring practice, Coach Chuck Jordan (who is white) benched Hunt (who is black) in favor of Mickey Wilson, an inexperienced white player. Seeing this demotion of the black quarterback as an example of the racism prevalent in football generally and in Conway specifically, thirty-one of the team's thirty-seven black players--under the guidance of H. H. Singleton, pastor of Cherry Hill Missionary Baptist Church and president of the local NAACP--boycotted the team in protest. The season-long strike severed the town along racial lines, as it became clear that the incident was about much more than football. It was about the legacy of slavery and segregation and Jim Crow and other points of tension and

oppression that many people in Conway--and the South--had wrongly assumed were settled. While the 1989 season is long over, the story reverberates today. Chuck Jordan is still coaching at Conway High, and he's still without that state championship. Meanwhile, Mickey Wilson is now coaching Conway's fiercest rival, the Myrtle Beach Seahawks. In the annual Victory Bell Game between Conway and Myrtle Beach, the biggest contest of the year for both teams, a veteran coach and his young protégé compete against each other--against the backdrop of a racial conflict that bitterly divided a small southern town.

Autonomous weapons systems seem to be on the path to becoming accepted technologies of warfare. The weaponization of artificial intelligence raises questions about whether human beings will maintain control of the use of force. The notion of meaningful human control has become a focus of international debate on lethal autonomous weapons systems among members of the United Nations: many states have diverging ideas about various complex forms of human-machine interaction and the point at which human control stops being meaningful. In *Autonomous Weapons Systems and International Norms* Ingild Bode and Hendrik Huelss present an innovative study of how testing, developing, and using weapons systems with autonomous features shapes ethical and legal norms, and how standards manifest and change in practice. Autonomous weapons systems are not a matter for the distant future - some autonomous features, such as in air defence systems, have been in use for decades. They have already incrementally changed use-of-force

norms by setting emerging standards for what counts as meaningful human control. As UN discussions drag on with minimal progress, the trend towards autonomizing weapons systems continues. A thought-provoking and urgent book, *Autonomous Weapons Systems and International Norms* provides an in-depth analysis of the normative repercussions of weaponizing artificial intelligence.

This book focuses on issues of method and interpretation in studies of submerged landscapes, concentrating on illustrations and case studies from around Europe with additional examples from other parts of the world. Such landscapes were once exposed as dry land during the low sea levels that prevailed during the glacial periods that

occupied most of the past million years and provided extensive new territories for human exploitation. Their study today involves underwater investigation, using techniques and strategies which are clearly set out in these chapters. The underwater landscape provides a rich source of information about the archaeology of human settlement and long-term changes in environment, climate and sea-level. This book highlights how such information can be revealed and interpreted. The examples presented here and the focus on techniques make this book of worldwide relevance. Chapters describe examples of underwater archaeological investigation as well as collaboration with offshore industries and legal, management and training issues relating to underwater cultural heritage. Such studies point to the significance of this drowned landscape, and readers are invited to consider its human impact in terms of past settlement and population dispersal through palaeolandscapes reconstruction and interpretation in relation to broader themes in human prehistory. This volume is based on work from COST Action SPLASHCOS, a four-year multi-disciplinary and multi-national research program supported by COST (European Cooperation in Science and Technology) and has something to benefit all those with an interest in the sea floor of the continental shelf and the archaeological and social impact of sea-level change, including archaeologists, marine scientists, geographers, cultural-heritage managers, commercial and governmental organisations, policy makers and interested members of the public.

"In *The Sports Strategist: Developing Leaders for a High-Performance Industry*, authors Irving Rein, Ben Shields, and Adam Grossman demonstrate that relying too much on winning is a losing long-term strategy for dealing with these challenges. Instead, they argue that sports organizations must focus on identifying and maximizing key factors that, unlike winning, can be controlled and shaped. By building a more well-rounded business, sports strategists will position themselves and their organizations for sustainable success in the industry." -- Inside Cover

The Schenley Experiment is the story of Pittsburgh's first public high school, a social incubator in a largely segregated city that was highly—even improbably—successful throughout its 156-year existence. Established in 1855 as Central High School and reorganized in 1916, Schenley High School was a model of innovative public education and an ongoing experiment in diversity. Its graduates include Andy Warhol, actor Bill Nunn, and jazz virtuoso Earl Hines, and its prestigious academic program (and pensions) lured such teachers as future Pulitzer Prize winner Willa Cather. The subject of investment as well as destructive neglect, the school reflects the history of the city of Pittsburgh and provides a study in both the best and worst of urban public education practices there and across the Rust Belt. Integrated decades before *Brown v. Board of Education*, Schenley succumbed to default segregation during the "white flight" of the 1970s; it rose again to prominence in the late 1980s, when parents camped out in six-day-long lines to enroll their children in visionary superintendent Richard C.

Wallace's reinvigorated school. Although the historic triangular building was a cornerstone of its North Oakland neighborhood and a showpiece for the city of Pittsburgh, officials closed the school in 2008, citing over \$50 million in necessary renovations—a controversial event that captured national attention. Schenley alumnus Jake Oresick tells this story through interviews, historical documents, and hundreds of first-person accounts drawn from a community indelibly tied to the school. A memorable, important work of local and educational history, his book is a case study of desegregation, magnet education, and the changing nature and legacies of America's oldest public schools.

Does gender matter in global climate change? This timely and provocative book takes readers on a guided tour of basic climate science, then holds up a gender lens to find out what has been overlooked in popular discussion, research, and policy debates. We see that, around the world, more women than men die in climate-related natural disasters; the history of science and war are intimately interwoven masculine occupations and preoccupations; and conservative men and their interests drive the climate change denial machine. We also see that climate policymakers who embrace big science approaches and solutions to climate change are predominantly male with an ideology of perpetual economic growth, and an agenda that marginalizes the interests of women and developing economies. The book uses vivid case studies to highlight the sometimes surprising differential, gendered impacts of climate changes.

This new handbook provides a comprehensive overview of the issues facing naval strategy and security in the twenty-first century. Featuring contributions from some of the world's premier researchers and practitioners in the field of naval strategy and security, this handbook covers naval security issues in diverse regions of the world, from the Indian Ocean and the Mediterranean to the Arctic and the piracy-prone waters off East Africa's coast. It outlines major policy challenges arising from competing claims, transnational organized crime and maritime terrorism, and details national and alliance reactions to these problems. While this volume provides detailed analyses on operational, judicial, and legislative consequences that contemporary maritime security threats pose, it also places a specific emphasis on naval strategy. With a public very much focused on the softer constabulary roles naval forces play (such as humanitarian assistance, disaster relief, naval diplomacy, maintenance of good order at sea), the overarching hard-power role of navies has been pushed into the background. In fact, navies and seapower have been notably absent from many recent academic discussions and deliberations of maritime security. This handbook provides a much-desired addition to the literature for researchers and analysts in the social sciences on the relationship between security policy and military means on, under, and from the sea. It comprehensively explains the state of naval security in this maritime century and the role of naval forces in it. This book will be of much interest to students of naval security and naval strategy, security studies and IR, as well as practitioners in the field.

With 1,098 wins and eight national championships, Lady Vol Coach Pat Summitt has left a remarkable legacy of perseverance, leadership, and passion for the game—but her victories on the court aren't the only legacy she has left in her wake. Since the beginning of her career as Lady Vol head coach at twenty-two years old, Pat Head Summitt effectively established the University of Tennessee Lady Vols as the top women's athletics program in the nation. The winningest coach in the history of NCAA basketball, Summitt overcame one obstacle after another on the road to every victory, but it is the lives she has impacted along the way that tell the story of her true legacy. Forever a role model for young women, expecting nothing but the best from her players and from those around her, her legacy has never faltered—not even during her final season as head coach, when she faced her fiercest adversary yet: the diagnosis of early-onset Alzheimer's disease. In *The Final Season: The Perseverance of Pat Summitt*, Maria M. Cornelius tells the story of her final coaching season through the eyes of those who know her best, from players to support staff to Summitt's closest friends and advisors. Beginning with the diagnosis that shook the Tennessee community in the summer of 2011 and continuing through to the final game of the 2011-12 season, *The Final Season* presents readers with a behind-the-scenes look at the conclusion of Summitt's coaching career, detailing from the perspective of a sports writer how her diagnosis impacted her players and her staff as well as her fans. With

forewords by former Lady Vol Candace Parker and Swish Appeal editor Mike Robinson, *The Final Season* reveals how Summitt's remarkable story of perseverance not only united a team of young women but also brought an entire sports following together, revealing an incredible support system that spanned far beyond Summitt's Tennessee community. The coach's determined spirit, selfless love, and sense of humor shine through the pages of Cornelius's book, painting for readers the picture of a beloved leader and detailing the personal moments of defeat and triumph that make Summitt a true champion. It is often assumed that think tanks carry enormous weight with lawmakers and other key stakeholders. In *Do Think Tanks Matter?* Donald Abelson argues that the question of how think tanks have evolved and under what conditions they can and do have an impact continues to be ignored. Think tank directors often credit their institutes with influencing major policy debates and government legislation, and many journalists and scholars believe the explosion of think tanks since the latter part of the twentieth century is indicative of their growing importance in the policy-making process. Abelson goes beyond assumptions, highlighting both the visibility and relevance of public policy institutes in what has become a contentious and polarized political arena in the United States, and in Canada, where, despite recent growth in numbers, they enjoy less prominence than their US counterparts. By focusing on how think tanks engage in issue articulation, policy formation, and implementation, Abelson argues that they have helped to shape the political

dialogue and the policy preferences and choices of decision-makers, but in different ways and at different stages of the policy cycle. This expanded and revised third edition includes additional institutional profiles of key think tanks, an updated chapter on presidents and think tanks, a new chapter on the efforts of a group of public policy institutes to shape the discourse around the possible construction of the controversial Keystone XL pipeline, and dozens of new graphs and tables that track the public visibility and perceived policy relevance or impact of top-tier think tanks.

The signs are there: our coastal cities are increasingly susceptible to flooding as the climate changes. Charleston, South Carolina, is no exception, and is one of the American cities most vulnerable to rising sea levels. *Lowcountry at High Tide* is the first book to deal with the topographic evolution of Charleston, its history of flooding from the seventeenth century to the present, and the efforts made to keep its populace high and dry, as well as safe and healthy. For centuries residents have made many attempts, both public and private, to manipulate the landscape of the low-lying peninsula on which Charleston sits, surrounded by wetlands, to maximize drainage, and thus buildable land and to facilitate sanitation. Christina Butler uses three hundred years of archival records to show not only the alterations to the landscape past and present, but also the impact those efforts have had on the residents at various socio-economic levels throughout its history. Wide-ranging and thorough, *Lowcountry at High Tide* goes beyond the documentation of reclamation and filling and offers a look into the life and the

history of Charleston and how its people have been affected by its unique environment, as well as examining the responses of the city over time to the needs of the populace. Butler considers interdisciplinary topics from engineering to public health, infrastructure to class struggle, and urban planning to civic responsibility in a study that is not only invaluable to the people of Charleston, but for any coastal city grappling with environmental change. Illustrated with historical maps, plats, and photographs and organized chronologically and thematically within chapters, *Lowcountry at High Tide* offers a unique look at how Charleston has kept—and may continue to keep—the ocean at bay.

Racist policies are identified as "opportunity killers," and the disparities created by them often have racism sustained through race-neutral policies. *Systemic Racism in America: Sociological Theory, Education Inequality, and Social Change* situates our contemporary moment within a historical framework and works to identify forms, occurrences, and consequences of racism as well as argue for concrete solutions to address it. This volume assembles renowned and thought-provoking social scientists to address the destructive impacts of structural racism and the recent, incendiary incidents that have driven racial injustice and racial inequality to the fore of public discussion and debate. The book is organized into three parts to explore and explain the ways in which racism persists, permeates, and operates within our society. The first part presents theoretical perspectives to analyze the roots and manifestation of contemporary racism; the second concentrates on

educational inequality and structural issues within our institutions of learning that have led to stark racial disparities; and the third and final section focuses on solutions to our current state and how people, regardless of their race, can advocate for racial equity. Urgent and needed, *Systemic Racism in America* is valuable reading for students and scholars in the social sciences, as well as informed readers with an interest in racism and racial inequality and a passion to end it.

How the billionaire owners of Hobby Lobby are spending hundreds of millions of dollars to make America a “Bible nation” The Greens of Oklahoma City—the billionaire owners of the Hobby Lobby chain—are spending hundreds of millions of dollars in an ambitious effort to increase the Bible’s influence on American society. In *Bible Nation*, Candida Moss and Joel Baden provide the first in-depth

investigative account of the Greens' sweeping Bible projects. Moss and Baden tell the story of the Greens' efforts to place a Bible curriculum in public schools; their rapid acquisition of an unparalleled collection of biblical antiquities; their creation of a closely controlled group of scholars to study and promote the collection; and their

construction of a \$500 million Museum of the Bible in Washington, D.C. Revealing how all these initiatives promote a very particular set of beliefs about the Bible, the book raises serious questions about the trade in biblical antiquities, the integrity of academic research, and the place of private belief in public life.
