Qatar's support for regional Muslim Brotherhood organizations and its Al Jazeera media network have contributed to a backlash against Qatar led by fellow GCC states Saudi Arabia and the UAE. In June 2017, Saudi Arabia, the UAE, and Bahrain, joined by Egypt and a few other governments, severed relations with Qatar and imposed limits on the entry and transit of Qatari nationals and vessels in their territories, waters, and airspace. The Trump Administration sought a resolution of the dispute, in part because the rift was hindering U.S. efforts to formalize a "Middle East Strategic Alliance" of the United States, the GCC, and other Sunni-led countries in the region to counter Iran. Qatar has countered the Saudi-led pressure with new arms purchases and deepening relations with Turkey and Iran. On January 5, 2021, Saudi Arabia, the UAE, Bahrain, and Egypt agreed to lift the blockade, and Qatar agreed to drop its pursuit of legal cases against those countries in international organizations. Qatar's leaders work with the United States to secure the Persian Gulf, as do the other GCC leaders. The United States and Qatar have had a formal Defense Cooperation Agreement (DCA) that reportedly addresses a U.S. troop presence in Qatar, consideration of U.S. arms sales to Qatar, U.S. training, and other defense cooperation. Under the DCA, Qatar hosts more than 8,000 U.S. forces and the regional headquarters for U.S. Central Command (CENTCOM) at various military facilities, including the large Al Udeid Air Base. U.S. forces deployed at these facilities participate in operations throughout the region. Qatar is a significant buyer of U.S.-made weaponry, including combat aircraft. In January 2018, Qatar and the United States inaugurated a "Strategic Dialogue" that has included discussion of efforts to improve accommodations for U.S. personnel deployed to Al Udeid Air Base. In 2017, the United States and Qatar signed a broad memorandum of understanding to cooperate against international terrorism. The voluntary relinquishing of power in 2013 by Qatar's former Amir (ruler) departed from GCC patterns of governance in which leaders generally remain in power for life. At the same time, Qatar is the only one of the smaller GCC states that has not yet held elections for a legislative body. U.S. and international reports, which are scrutinizing Qatar as its hosting of the World Cup soccer tournament approaches in 2022, criticize Qatar for not adhering to international standards of labor rights practices, but credit it for taking steps to improve the conditions for expatriate workers. Like other GCC states, Qatar is wrestling with the fluctuations in global hydrocarbons prices that started in 2014 and were compounded by the Coronavirus Disease

2019 (COVID-19). As of early April, Qatar has reported about 178,000 infections and 290 deaths from the disease, which has affected Qatar's expatriate population disproportionately. Qatar has been able to weather economic headwinds because of its small population, substantial financial reserves, and its favorable business conditions for entrepreneurs. But, Qatar shares with virtually all the other GCC states a lack of economic diversification and reliance on revenues from sales of hydrocarbon products. On December 3, 2018, Qatar withdrew from the Organization of Petroleum Exporting Countries (OPEC) in order to focus on its natural gas export sector; Qatar has the third largest proven reserves of natural gas in the world.

Energy-Efficient Retrofit of Buildings by Interior Insulation Butterworth-Heinemann

This anthology discusses the converging operational issues of air base defense and counterinsurgency. It explores the diverse challenges associated with defending air assets and joint personnel in a counterinsurgency environment. The authors are primarily Air Force officers from

security forces, intelligence, and the office of special investigations, but works are included from a US Air Force pilot and a Canadian air force officer. The authors examine lessons from Vietnam, Iraq, Afghanistan, and other conflicts as they relate to securing air bases and sustaining air operations in a high-threat counterinsurgency environment. The essays review the capabilities, doctrine, tactics, and training needed in base defense operations and recommend ways in which to build a strong, synchronized ground defense partnership with joint and combined forces. The authors offer recommendations on the development of combat leaders with the depth of knowledge, tactical and operational skill sets, and counterinsurgency mind set necessary to be effective in the modern asymmetric battlefield.

It has, improbably, been called uncommonly lucid, even riveting by The New York Times, and it was a finalist for the 2004 National Book Awards nonfiction honor. It is a literally chilling read, especially in its minute-by-minute description of the events of the morning of 9/11 inside the Twin Towers. It is The 9/11 Commission Report, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the United States-which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean-it details what went wrong on that day (such as intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks. Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts-it has been criticized for failing to include

testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7-it is nevertheless an essential record of one of the most transformational events of modern times.

Qatar's road to diversification is paved with ambitious investment programs in a host of sectors, such as agribusiness, IT, and food security. These investment programs and the trends and challenges shaping the Qatari economy are covered in great detail in The Business Year: Qatar 2020, our sixth publication dedicated to the country, produced in partnership with the Ministry of Commerce and Industry and the Qatari Businessmen Association. Over the period of our fact-finding, time and time again we were struck by the positive approach of the different stakeholders to tackling the blockade introduced in 2017. Investors looking to understand the major trends and key players in the Qatari economy will find what they need within the pages of this publication. The Business Year's country-specific publications, sometimes featuring over 150 face-to-face interviews, are among the most comprehensive annual economic publications available internationally.

Governance, Security, and U.S. Policy Butterworth-Heinemann

Fire and combustion presents a significant engineering challenge to mechanical, civil and dedicated fire engineers, as well as specialists in the process and chemical, safety, buildings and structural fields. We are reminded of the tragic outcomes of 'untenable' fire disasters such as at King's Cross underground station or Switzerland's St Gotthard tunnel. In these and many other cases, computational fluid dynamics (CFD) is at the forefront of active research into unravelling the probable causes of fires and helping to design structures and systems to ensure that they are less likely in the future. Computational fluid dynamics (CFD) is routinely used as an analysis tool in fire and combustion engineering as it possesses the ability to handle the complex geometries and characteristics of combustion and fire. This book shows engineering students and professionals how to understand and use this powerful tool in the study of combustion processes, and in the engineering of safer or more fire resistant (or conversely, more fire-efficient) structures. No other book is dedicated to computer-based fire dynamics tools and systems. It is supported by a rigorous pedagogy, including worked examples to illustrate the capabilities of different models, an introduction to the essential aspects of fire physics, examination and self-test exercises, fully worked solutions and a suite of accompanying software for use in industry standard modeling systems. · Computational Fluid Dynamics (CFD) is widely used in engineering analysis; this is the only book dedicated to CFD modeling analysis in fire and combustion engineering · Strong pedagogic features mean this book can be used as a text for graduate level mechanical, civil, structural and fire engineering courses, while its coverage of the latest techniques and industry standard software make it an important reference for researchers and professional engineers in the mechanical and structural sectors, and by fire engineers, safety consultants and regulators · Strong author team (CUHK is a recognized centre of excellence in fire eng) deliver an expert package for students and professionals, showing both theory and applications. Accompanied by CFD modeling code and ready to use simulations to run in industry-standard ANSYS-CFX and Fluent software.

Freedom in the World, the Freedom House flagship survey whose findings have been published annually since 1972, is the standard-setting comparative assessment of global political rights and civil liberties. The survey ratings and narrative reports on 193 countries and a group of select territories are used by policy makers, the media, international corporations, and civic activists and human rights defenders to monitor trends in democracy and track improvements and setbacks in freedom worldwide. Press accounts of the survey findings appear in hundreds of influential newspapers in the United States and abroad and form the basis of numerous radio and television reports. The Freedom in the World political rights and civil liberties ratings are determined through a multi-layered process of research and evaluation by a team of regional analysts and eminent scholars. The analysts used a broad range of sources of information, including foreign and domestic news reports, academic studies, nongovernmental organizations, think tanks, individual professional contacts, and visits to the region, in conducting their research. The methodology of the survey is derived in large measure from the Universal Declaration of Human Rights, and these standards are applied to all countries and territories, irrespective of geographical location, ethnic or religious composition, or level of economic development.
