This book is premised on the assumption that games and simulations provide welcome alternatives and supplements to traditional lectures and class discussions—especially in political science classrooms, where real-world circumstances provide ideal applications of theory and policy prescriptions. Implementing such an active learning program, however, is sometimes daunting to overburdened professors and teaching assistants. This book addresses the challenges of using games and simulations in the political science classroom, both online and in person. Each chapter offers a game or simulation that politics teachers can use to teach course concepts and explains ways to execute it effectively. In addition, the authors in this volume make a proactive case for games and simulations. Each chapter offers research to evaluate the effectiveness of the activity and pedagogical design best practices. Thus, the book not only serves as a game design resource, but also offers demonstrable support for using games and simulations in the political science classroom. Aimed at teachers at all levels, from high school through college, the book may be especially appealing to graduate students entering teaching for the first time and open to new teaching and learning approaches.

Unlike other trial advocacy books that teach what to say and do in the courtroom, this reference teaches how to say and do it. Based on 25 years of experience from coaching practitioners, this handbook reveals techniques—incorporating cutting-edge discoveries in linguistics, neuroscience, and sports psychology—to help litigators look, sound, and feel natural and polished in the courtroom. Questions that lawyers face daily, such as What do I do with my hands? Aren't gestures distracting? How do I remember everything? and I tend to talk so fast—how can I slow down? are among the questions addressed in this handbook.

A mock trial may officially begin with opening statements, but experienced competitors know that the dialogue between counsel and the court beforehand can make or break their chances of prevailing. In this new edition of Mock Trials the authors have added an entire new chapter (Pretrial Matters) to explain the questions students should ask before a mock trial begins and why the answers to those questions are important. Just as in an actual trial, pre-trial matters do matter in mock trials because they can affect nearly every aspect of case preparation and presentation. First

published in 2000, Mock Trials has become the leading textbook used by students and coaches to prepare for mock trial competitions. The Second Edition improves upon the first by providing students and coaches at every level with a complete step-by-step guide to preparing, presenting, and winning a mock trial. Diagrams, charts and summaries, as well as sample fact scenarios, colloquies, and arguments, are used to explain complicated concepts simply in an easy-to-follow and interesting manner. This textbook is specifically designed for use by pre-law and law students, but the legal and stylistic techniques it teaches remain applicable throughout lawyers' careers. For high school and undergraduate students competing in mock trials or considering a career in law, Mock Trials gives a solid overview of the conduct of a trial from start to finish. It's also perfect for mock trial coaches to use as a how-to guide.

Research on students' media use outside of education is just slowly taking off. Influences of information and communication technologies (ICT) on human information processing are widely assumed and particularly effects of dis- and misinformation are a current threat to democracies. Today, higher education competes with a very diverse (online) media landscape and domain-specific content from sources of varying quality, ranging from high-quality videographed lectures by top-level university lecturers, popular-scientific video talks, collaborative wikis, anonymous forum comments or blog posts to YouTube remixes of discipline factoids and unverified twitter feeds. Self-organizing learners need more knowledge, skills, and awareness on how to critically evaluate quality and select trustworthy sources, how to process information, and what cognitive, affective, attitudinal, behavioral, and neurological effects it can have on them in the long term. The PLATO program takes on the ambitious goal of uniting strands of research from various disciplines to address these questions through fundamental analyses of human information processing when learning with the Internet. This innovative interdisciplinary approach includes elements of ICT innovations and risks, learning analytics and large-scale computational modelling aimed to provide us with a better understanding of how to effectively and autonomously acquire reliable knowledge in the Information Age, how to design ICTs, and shape social and human-machine interactions for successful learning. This volume will be of interest to researchers in the fields of educational sciences, educational measurement and applied branches of the involved disciplines, including linguistics, mathematics, media studies, sociology of knowledge, philosophy of mind, business, ethics, and educational technology.
