The Poincaré Seminar is held twice a year at the Institut Henri Poincaré in Paris. This volume contains the lectures of the 2002 seminars. The main topic of the first one was the vacuum energy, in particular the Casimir effect and the nature of the cosmological constant. The second one concentrated on renormalization, giving a comprehensive account of its mathematical structure and applications to high energy physics, statistical mechanics and classical mechanics. Students will find excellent introductions to the subjects with further lectures leading to the frontiers of experimental and theoretical research, scientists will profit from contributions by outstanding experts.

This collection of essays is intended as a tribute to Josef Maria Jauch on his sixtieth birthd~. Through his scientific work Jauch has justly earned an honored name in the community of theoretical physicists. Through his teaching and a long line of distinguished collaborators he has put an imprint on modern mathematical physics. A number of Jauch's scientific collaborators, friends and admirers have contributed to this

collection, and these essays reflect to some extent Jauch's own wide interests in the vast domain of theoretical physics. Josef Maria Jauch was born on 20 September 1914, the son of Josef Alois and Emma (nee Conti) Jauch, in Lucerne, Switzerland. Love of science was aroused in him early in his youth. At the age of twelve he came upon a popular book on astronomy, and an example treated in this book mystified him. It was stated that if a planet travels around a centre of Newtonian attraction with a period T , and if that planet were stopped and left to fall into the centre from any point of the circular orbit, it would arrive at the centre in the time $T/132$. Young Josef puzzled about this for several months until he made his first scientific discovery: that this result could be derived from Kepler's third law in a quite elementary way.

The field of sports history is no longer a fledgling area of study. There is a great vitality in the field and it has matured dramatically over the past decade. Reflecting changes to traditional approaches, sport historians need now to engage with contemporary debates about history, to be encouraged to position themselves and their methodologies in relation to current epistemological issues, and to promote the importance of reflecting on the literary or poetic dimensions of producing history. These contemporary developments, along with a wealth of international research from a range of theoretical perspectives, provide the backdrop to the new Routledge Companion to Sports History. This book provides a comprehensive guide to the international field of sports history as it has developed as an academic area of study. Readers are guided through the development of the field across a range of thematic and geographical contexts and are introduced to the latest cutting edge approaches within the field. Including contributions from many of the world's leading sports historians, the Routledge Companion to Sports History is the most important single volume for researchers and students in, and entering, the sports history field. It is an essential guide to contemporary research themes, to new ways of doing sports history, and to the theoretical and methodological foundations of this most fascinating of subjects.
