Accounting for Managers SAGE

The only truly Australasian text on Strategic Management, written specifically for the unique requirements of modern Australasian businesses - from start-ups to multinationals. Assuming an international perspective but written for an Australian and New Zealand audience, the text highlights how all organisations are affected by international issues, whether through suppliers, operations, competitors or customers. To provide a clear and practical application of theory, ten new case studies have been included in this edition to respond to the demand for them at this level of study in this discipline. Additionally, the text allows a more theoretical perspective to be taken than is normally possible in strategy texts. This suits undergraduate courses where students have little practical experience and where conceptual principles are being developed. However, postgraduate students seeking a more conceptual understanding also find this emphasis valuable. Theoretically strong, Strategic Management covers all theories and major research, yet has a practical, unifying and integrated theme in the environment-strategy-capability gap analysis model.

What is my theory? How do I choose a theory? Why and how should I employ a particular method for collecting the empirical data? These basic questions concern everyone involved in research. A research study can be a voyage of discovering or choice of theoretical perspective as well as gathering empirics or facts on a problem or situation. This book provides a good guideline as to why and how to choose a particular theory or method to study an organisational phenomenon such as accounting. All the chapters provide both retrospective and contemporary views by scholars in the field. Each chapter documents the latest developments and research in accounting and control systems and provides valuable insights into methodological perspectives in accounting research. This second edition has also introduced a number of new chapters covering strategy-management control as practice, grounded theory approach, institutional logic and rhetoric, social interaction theory, actor-network theory and practice theory. The book is primarily intended for research students and academic researchers. It can also be used for undergraduate Honours course as well as postgraduate accounting and business methodology courses. Research organisations and consulting firms in accounting and business fields may also find this book useful. The principal aims of this second edition are (1) to update the chapters previously published in 2006 and (2) to introduce new chapters documenting recent developments in accounting research.
