This book presents a multidisciplinary evidence-based approach to the management of teeth with lesions of endodontic-periodontal origin. The book opens by addressing the etiology and classification of endodontic-periodontal lesions, and demonstrates its relevance to the daily practice. Specific endodontic, prosthetic, and periodontal considerations that should be incorporated into clinical decision making and treatment planning are then discussed in detail. Subsequent chapters describe modern clinical procedures in periodontal regenerative treatment, describe vertical root fractures as an endodontic-periodontal lesion, examine treatment alternatives following the extraction of teeth with endodontic-periodontal lesions, and discuss possible biological complications in implant supported oral rehabilitation. Finally, a summary chapter considers the integration of clinical factors and patient values into clinical decision making. The text is accompanied by many figures presenting informative clinical examples. The authors are internationally renowned scientists and clinicians from the specialties of Endodontology, Periodontology, and Oral Rehabilitation. Owing to its multidisciplinary and comprehensive nature, the book will be relevant and interesting to the entire dental community.

 This concise, hands-on text provides a method for making evidence-based decisions in practice. The book presents a step-by-step approach to mastering the five essential skills of evidence-based decision making-formulating patient-centered questions, searching for the appropriate evidence, critically appraising the evidence, applying the evidence to practice, and evaluating the process. Five Case Scenarios are used throughout the book and cover the broad areas of therapy/prevention, diagnosis, etiology/harm/causation, and prognosis. Each chapter has objectives, suggested activities, a quiz, critical thinking questions, and exercises.

 This book is an ideal reference guide for clinicians seeking to improve their decision making and treatment outcomes when placing dental implants in medically compromised patients, in whom conditions for osseointegration and soft tissue healing may be unfavorable. Up-to-date information is provided on the potential impacts of a wide variety of diseases and disorders on dental implant treatment and the factors that need to be considered when deciding on the feasibility of such treatment. More specifically, for each condition possible disease-related changes in the oral environment are explained and key treatment issues are identified, including surgical and prosthodontic aspects and pharmacological considerations. The book will help general dentists, periodontists, and oral surgeons to reduce the risk of treatment failure and complications and to ensure that the implant therapy is successful in achieving excellent quality of life and functional benefits, thereby improving patient satisfaction.
