MAKE MONEY IN SHORT-SALE FORECLOSURES Foreclosures are the most profitable way to invest in real estate. But most real estate books on foreclosures don't tell you how to invest in short-sale foreclosures--properties with even more profit potential than regular foreclosures. A short-sale foreclosure is a lender accepting a loan payoff for less than the amount owed. This comprehensive new guide from renowned real estate authors Chantal and Bill Carey covers all the ins and outs of short-sale foreclosure investing, from finding properties to negotiating with lenders, to closing the deal and making a bundle. Inside you'll find all the information you need to succeed: * Finding great short-sale foreclosure deals * Dealing with owners in financial distress *

When to buy short-sale foreclosures * Creating equity in foreclosure properties * Writing successful short-sale offers * FHA, VA, and private mortgage insurance short-sales * Purchasing short-sale properties at auction * Understanding escrow, closing, and title insurance * Flipping short-sale properties

Conducting research requires resources to meet the research need. The resources in the research institutes/ centers are often

inadequate, limiting the research outcome. Research grants help overcome those limitations and help the researchers carry out quality research without any restriction. Grant proposal writing is an essential skill to be mastered by every researcher. However, the majority of the medical schools, except the few research institutes, do not have a structured learning module for obtaining grants. On most occasions, the skill of writing grant proposals goes by self-learning. For students, it is burdening due to the tremendous time consumed to learn the craft of writing the grant proposal and the exhausting clinical and academic work. This book is carefully prepared to keep in mind the difficulties faced by the young researchers and the students concerning choosing a funding agency, grant makers' expectations, budgeting, surveillance and site visits, rights of the researcher and the funding agency, and ethical and legal aspects of obtaining the grant. The book also covers the alternate plan for partial funding or interruption of the financing, reporting the source of funding and acknowledgment, good clinical practice guidelines, and dealing with the rejected grant proposal. The research projects are often dropped or modified extensively due to the limited resources in the existing facility. The researchers are forced to compromise the research objective due to expensive requirements. There is a shortage of awareness regarding the availability of funding and grant for the conduct of research. Even if the researchers are aware of obtaining the financing, there is a lack of training in grant proposal writing, which is essential in getting the research funding. This book on grant proposal writing for medical and healthcare professionals covers such difficulties and deficiencies. It will provide complete companionship from knowing the funding agency to obtaining the grant.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in

powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Within the business community, succession planning plays a key role in an organization's strategic initiatives. Within healthcare, however, it has been largely overlooked. Without careful planning, healthcare organizations risk a catastrophic gap in leadership continuity that could jeopardize operational cost management, quality of care improvement, and regulatory compliance. How do you close that dangerous gap? Thoughtful succession planning. The Career Handoff helps healthcare and nurse leaders proactively preserve and pass on their valuable knowledge and wisdom to new generations. With an approach that emphasizes mentoring and sustainability of expertise, this book aims to facilitate smooth transitions and the continued viability of healthcare organizations. Authors Kathy Malloch and Tim Porter-O'Grady share their extensive knowledge through guidelines, stories, and lived experiences. For those with retirement on the horizon—and their potential successors—The Career Handoff offers insightful guidance and succession planning

strategies that position healthcare organizations for a sustainable, successful future.

This report describes the work of the Committee on Proposal Evaluation for Allocation of Supercomputing Time for the Study of Molecular Dynamics, Ninth Round. The committee evaluated submissions received in response to a Request for Proposals (RFP) for biomolecular simulation time on Anton 2, a supercomputer specially designed and built by D.E. Shaw Research (DESRES). Over the past 8 years, DESRES has made an Anton or Anton 2 system housed at the Pittsburgh Supercomputing Center (PSC) available to the non-commercial research community, based on the advice of previous National Research Council committees. As in prior rounds, the goal of the ninth RFP for simulation time on Anton 2 is to continue to facilitate breakthrough research in the study of biomolecular systems by providing a massively parallel system specially designed for molecular dynamics simulations. The program seeks to continue to support research that addresses important and high impact questions demonstrating a

clear need for Anton's special capabilities. Report of the Committee on Proposal Evaluation for Allocation of Supercomputing Time for the Study of Molecular Dynamics, Ninth Round is the final report of the committee's evaluation of proposals based on scientific merit, justification for requested time allocation, and investigator qualifications and past accomplishments. This report identifies the proposals that best met the selection criteria.

How to Write a Book Proposal Springer Nature

The public assumes the researcher spends the day dreaming up and trying out creative ideas. In reality, proposal development is an invisible but critical barrier over which even a good researcher may tumble. This book is intended to lower that barrier. It should increase first-trial recognition of good ideas and ensure that rejections do not result because a proposal poorly represented either the ideas, the investigator, or both.
