Intermediate Microeconomics Prentice Hall

This is a book about the utterly obvious. It's about the spiritual search, and the frustrations surrounding it. It's about those ultimate goals we set ourselves: enlightenment, awakening, liberation, and how those goals can never actually be reached, because - and here's the great discovery the person who seeks them has no more reality than a presently-arising belief. That is to say, "you" are just a thought, happening now. A sequel to the bestselling "Life Without A Centre: Awakening from the Dream of Separation," this book is packed with clear and vibrant expressions of nonduality. Time and time again, the text gently points back to the futility of both the spiritual search, and the "search to end the search" (another game the mind loves to play). With great humour, compassion and clarity, the book will draw you into a direct confrontation with your own absence, an absence which, paradoxically, is also a perfect presence. This may be the last book a spiritual seeker will ever need.

Economics of Natural Resources and the Environment brings together the approaches of natural resource economics and environmental economics to provide a comprehensive overview of the economics of national international and global environmental problems. A unifying theme throughout the book is the concept of "sustainable development" defined as "maximizing the net benefits of economic development while maintaining the services and quality of natural resources over time." The authors emphasize the continuing importance of a mainstream approach. They stress "economic efficiency—getting the most welfare out of a given endowment of resources." And they address the larger moral issues as well. Chapter topics include the historical development of environmental economics, environmental ethics, and pollution control policy in "free" mixed market and centrally planned economies. Other current issues seen from an economic perspective include destruction of the ozone layer, the greenhouse effect, policy weapons in the fight against pollution, and the special problems of the third world. *Economics of Natural Resources and the Environment* offers a thorough review and synthesis of the major work of the field's senior scholars. It will be of value not only to students of natural resource economics, environmental economics, geography, and environmental sciences but also to all with an interest in economic approaches to environmental issues.

There has been an explosion of interest in entrepreneurs in the popular media, as well as in business, policy, and education. But what do entrepreneurs do? What is entrepreneurship and why is it important? What is distinctive about entrepreneurs? And where do they come from? In this Very Short Introduction Paul Westhead and Mike Wright weave a pathway through the debates about entrepreneurship, providing a guide to the entrepreneurial process. They look at how the actions of entrepreneurs are shaped by the external environment and availability of resources, consider the types of organizations in which entrepreneurs can be found, and look at the diversity in their backgrounds, experience, and how they think and learn. Lastly, they consider the impact that entrepreneurs have on modern market economies and look at the future of entrepreneurship in our increasingly globalized world. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

[In this book, the authors] are interested not only in what humans are and were like; [but they are] also interested in why they got to be that way, in all their variety. When there are alternative explanations, [the authors] try to communicate the necessity to evaluate them logically as well as on the basis of the available evidence. Throughout the book, [they] try to communicate that no idea, including ideas put forward in textbooks, should be accepted even tentatively without supporting tests that could have gone the other way. -Pref.
