The social problem of infant abandonment captured the public's imagination in Italy during the fifteenth century, a critical period of innovation and development in charitable discourses. As charity toward foundlings became a political priority, the patrons and supporters of foundling hospitals turned to visual culture to help them make their charitable work understandable to a wide audience. Focusing on four institutions in central Italy that possess significant surviving visual and archival material, *Visual Cultures of Foundling Care in Renaissance Italy* examines the discursive processes through which foundling care was identified, conceptualized, and promoted. The first book to consider the visual culture of foundling hospitals in Renaissance Italy, this study looks beyond the textual evidence to demonstrate that the institutional identities of foundling hospitals were articulated by means of a wide variety of visual forms, including book

illumination, altarpieces, fresco cycles, institutional insignia, processional standards, prints, and reliquaries. The author draws on fields as diverse as art history, childhood studies, the history of charity, Renaissance studies, gender studies, sociology, and the history of religion to elucidate the pivotal role played by visual culture in framing and promoting the charitable succor of foundlings.

In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact,

we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of "experimental philosophy," provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection

between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

Proceedings of the Fourth International Workshop on the History of Speech Communication Research
Lickle Pub Incorporated
This volume contains studies presented at the

4th International Workshop on the History of Speech Communication Research (HSCR 2021). The series of workshops was initiated in Dresden in 2015. The current workshop took place in Prague at the Institute of Phonetics, Charles University, amid the ever-changing pandemic circumstances – for the first time in a hybrid form. There are nine contributions, written by 12 authors from six countries. The contributions analyze the contextual background of particular personalities or investigate how specific research practices developed over time. Moreover, each contribution demonstrates a significant connection between various aspects of speech communication research and the wider social context. A special theme of this workshop was the link in linguistic signs between the form (sound) and the meaning (sense). The phonetic endeavour was often claimed to concern only the form, while meaning was delegated to someone else. This is not only one-sided, but also difficult to integrate into the large body of scientific knowledge, as the opening keynote

emphasized.

Nietzsche und die antike Philosophie Hassell Street Press

How can we distinguish between injustice and misfortune? What can we learn from the victims of calamity about the sense of injustice they harbor?

In this book a distinguished political theorist ponders these and other questions and formulates a new political and moral theory of injustice that

encompasses not only deliberate acts of cruelty or unfairness but also indifference to such acts.

Judith N. Shklar draws on the writings of Plato, Augustine, and

Montaigne, three skeptics who gave the theory of injustice its main

structure and intellectual force, as well as on

political theory, history, social psychology, and

literature from sources as diverse as Rosseau,

Dickens, Hardy, and E. L. Doctorow. Shklar argues

that we cannot set rigid rules to distinguish

instances of misfortune from injustice, as most

theories of justice would have us do, for such

definitions would not take into account historical

variability and differences in perception and interest

between the victims and

spectators. From the victim's point of view--whether it be one who suffered in an earthquake or as a result of social discrimination--the full definition of injustice must include not only the immediate cause of disaster but also our refusal to prevent and then to mitigate the damage, or what Shklar calls passive injustice.

With this broader definition comes a call for greater responsibility from both citizens and public servants. When we attempt to make political decisions about what to do in specific instances of injustice, says Shklar, we must give the victim's voice its full weight. This is in keeping with the best impulses of democracy and is our only alternative to a complacency that is bound to favor the unjust.

As whole, the ecommerce industry is ANTIQUATED.

It's out of date! and is way way way behind in terms of what's actually working

in the world of online business. Most

ecommerce business owners are still doing

things in the same way they were done back in

the early dot com days.

And that my friend is a recipe for disaster. There

is SO much more to ecommerce than building

a store, filling it with products and driving

some traffic. If that

describes you and your business, then let this be

your wake up call! There is a transformative shift

happening in the

ecommerce industry right now. What worked before

is either no longer an

option or is rapidly losing its effectiveness. It's time

Books on Demand Revised and updated for the 2nd edition, this textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, robots and involuntary unemployment, financial integration and house price dynamics, policies to mitigate climate change and the persistence of religion in a globalized market economy are explored. The first part starts from the "old" growth theory and bridges to the "new" growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter- and intra-sectoral trade, investigates innovation, growth and trade and limits to public debt as well as nationally and internationally optimal climate policies. The debt dynamics of the Euro Zone and the origins of

intra-EMU and Asian-US trade imbalances are also explored. The book is primarily addressed to upper undergraduate and graduate students wishing to proceed to the analytically more demanding journal literature.

Catarina Belo explores the question of spirit in the history of philosophy and in various philosophical disciplines, highlighting its meaning and significance for Thomas Aquinas, George Berkeley, and Georg Wilhelm Friedrich Hegel, among other major figures. Belo argues that some of the traditional arguments concerning God, reason, and our knowledge of the world are shared by these philosophers, culminating but not ending in Hegel. In addition, she defends a kind of idealism that is not incompatible with realism. The book assumes the form a lively dialogue between a student and a teacher—following the literary tradition in philosophy that begins with Plato. The question of the spirit and its varied meanings are examined philosophically from a historical and a conceptual perspective.

A Man in the Zoo Faber & Faber

"In his satirically humorous society novel "Frau Jenny Treibel", which was published in 1892, Fontane unmasked the main characters in their selfish intrigues clearly enough as sentimental, conceited or downright pragmatic. Nevertheless, one can smile with sympathy towards the characters who come to such refreshing conclusions as: "Money is nonsense."-- Goodreads

Adventure on the Hoe SAP PRESS
 Algorithms permeate our lives in numerous ways, performing tasks that until recently could only be carried out by humans. Artificial Intelligence (AI) technologies, based on machine learning algorithms and big-data-powered systems, can perform sophisticated tasks such as driving cars, analyzing medical data, and evaluating and executing complex financial transactions - often without active human control or

supervision. Algorithms also play an important role in determining retail pricing, online advertising, loan qualification, and airport security. In this work, Martin Ebers and Susana Navas bring together a group of scholars and practitioners from across Europe and the US to analyze how this shift from human actors to computers presents both practical and conceptual challenges for legal and regulatory systems. This book should be read by anyone interested in the intersection between computer science and law, how the law can better regulate algorithmic design, and the legal ramifications for citizens whose behavior is increasingly dictated by algorithms.
