Mean, median, and mode (practice) | Khan Academy Mean Median Mode And Range Mean, Median, Mode, and Range The "range" of a list a numbers is just the difference between the largest and smallest values. Find the mean, median, mode, and range for the following list of values: 13, 18, 13, 14, 13, 16, 14, 21, 13 Mean, Median, Mode, and Range | Purplemath In general, mean, median, mode and range should ideally all be computed and analyzed for a given sample or data set since they elucidate different aspects of the given data, and if considered alone, can lead to misrepresentations of the data, as will be demonstrated in the following sections. Mean, Median, Mode, Range Calculator The terms mean, median, mode, and range describe properties of statistical distributions. In statistics, a distribution is the set of all possible values for terms that represent defined events. The value of a term, when expressed as a variable, is called a random variable. There are two major types of statistical distributions. What are Mean, Median, Mode and Range? In statistics, the mode in a list of numbers refers to the integers that occur most frequently. Unlike the median and mean, the mode is about the frequency of occurrence. There can be more than one mode or no mode at all; it all depends on the data set itself. For example, let's say you have the following list of numbers: Calculating the Mean, Median, and Mode Range - Range is the difference between the lowest number and the highest number. Take, for example, math test scores. Let's say your best score all year was a 100 and your worst was a 75. Then the rest of the scores don't matter for range. The range is $100 - 75 = 25$. The range is 25. Example problem finding mean, median, mode and range: Kids Math: Mean, Median, Mode and Range Calculate the mean, median, or mode of a data set!
