New Age International
This report takes an in-
depth look at how the
global drug trade has
turned the West African

nation into a crossroads of
instability. Over the past
decade, interdiction
efforts in the Americas
coupled with strong
market forces in Europe

have resulted in a growing transit of cocaine and other narcotics from Latin America across the Atlantic to West Africa and then into Europe. The report identifies three inter-woven trends that have contributed significantly to Guinea-Bissau's crises: First, a significant deterioration in civil-military relations over the last decade has led to increased political meddling by military officers, fragmentation within the security forces, and a sharp decline in military professionalism,

according to the report. Second, a disproportionate concentration of power residing in the presidency has led to intense and oftentimes unproductive competition for control over the Office of the President. Finally, the rise of the narcotics trade in Guinea-Bissau has exacerbated many of the country's governance problems. "[T]he drug trade has amplified the level of instability in the country and refutes the common assumption that transshipment of drugs

has a benign effect on the transited country." These events have directly contributed to instability in Senegal, Guinea, Liberia, Mali, Mauritania, Nigeria, and elsewhere in Africa. Meanwhile, emerging ethnic tensions, especially within the military, have complicated the country's cycle of crises. The report provides detailed recommendations for how to address Guinea-Bissau's complex challenges. The challenges faced by Guinea-Bissau, and the

policies and strategies developed to address those challenges, provide valuable lessons for dealing with the challenges of narco-states emerging elsewhere on the continent.

Buddhism is not a way of harmony and cosmic unity, as Westerners tend to think. Although Buddhism is a rapidly rising religion in the West, few Westerners know what Buddhism is like from the inside. Steve, who made the journey from Buddhism to Christ, explains the Buddhist mind-set and worldview, and makes useful points of comparison.

 Conflicted Antiquities is a rich cultural history of European and Egyptian interest in ancient Egypt and its material culture, from the early nineteenth century until the mid-twentieth. Consulting the relevant Arabic archives, Elliott Colla demonstrates that the emergence of Egyptology—the study of ancient Egypt and its material legacy—was as consequential for modern Egyptians as it was for Europeans. The values and practices introduced by the new science of

archaeology played a key role in the formation of a new colonial regime in Egypt. This fact was not lost on Egyptian nationalists, who challenged colonial archaeologists with the claim that they were the direct heirs of the Pharaohs, and therefore the rightful owners and administrators of ancient Egypt’s historical sites and artifacts. As this dispute developed, nationalists invented the political and expressive culture of “Pharaonism”—Egypt’s

response to Europe’s Egyptomania. In the process, a significant body of modern, Pharaonist poetry, sculpture, architecture, and film was created by artists and authors who looked to the ancient past for inspiration. Colla draws on medieval and modern Arabic poetry, novels, and travel accounts; British and French travel writing; the history of archaeology; and the history of European and Egyptian museums and exhibits. The struggle over the

ownership of Pharaonic Egypt did not simply pit Egyptian nationalists against European colonial administrators. Egyptian elites found arguments about the appreciation and preservation of ancient objects useful for exerting new forms of control over rural populations and for mobilizing new political parties. Finally, just as the political and expressive culture of Pharaonism proved critical to the formation of new concepts of nationalist identity, it also fueled

Islamist opposition to the Egyptian state.

This introductory text is an important resource for new engineers, chemists, students, and chemical industry personnel to understand the technical aspects of polypropylene which is the 2nd largest synthetic polymer in manufactured output. The book considers the following topics: What are the principal types of polypropylene and how do

they differ? What catalysts are used to produce polypropylene and how do they function? What is the role of cocatalysts and how have they evolved over the years? How are industrial polypropylene catalysts tested and the resultant polymer evaluated? What processes are used in the manufacture of polypropylene? What are the biopolymer alternatives to polypropylene? What companies are the major industrial manufacturers of polypropylene? What is

the environmental fate of polypropylene?

Environmental studies is a multidisciplinary subject that integrates the study of environment with social studies and sciences. The present series In Search of Green Life aims to develop an understanding of one's surroundings along with respect for local, national and global environment. We feel it is important for children to be aware and sensitive to

contrasting opportunities and constraints under which people live. The focus has been on developing independent thinking through a number of activities, Project Work has been provided in each unit to inculcate collaborative learning and communication skills among students. The book is interactive in nature as it provides for a lot of Fun Facts, Learning by Doing and ideas for discussion.

About the Book: Written by three distinguished authors with ample academic and teaching experience, this textbook, meant for diploma and degree students of Mechanical Engineering as well as those preparing for AMIE examination, incorporates the latest st **Oil, Paint and Drug Reporter and New York Druggists' Price Current** Leuven University Press In 2015, building on the advances of the Millennium Development

Goals, the United Nations adopted Sustainable Development Goals that include an explicit commitment to achieve universal health coverage by 2030. However, enormous gaps remain between what is achievable in human health and where global health stands today, and progress has been both incomplete and unevenly distributed. In order to meet this goal, a deliberate and comprehensive effort is needed to improve the quality of health care

services globally. Crossing the Global Quality Chasm: Improving Health Care Worldwide focuses on one particular shortfall in health care affecting global populations: defects in the quality of care. This study reviews the available evidence on the quality of care worldwide and makes recommendations to improve health care quality globally while expanding access to preventive and therapeutic services, with a focus in low-resource areas. Crossing the Global

Quality Chasm emphasizes the organization and delivery of safe and effective care at the patient/provider interface. This study explores issues of access to services and commodities, effectiveness, safety, efficiency, and equity. Focusing on front line service delivery that can directly impact health outcomes for individuals and populations, this book will be an essential guide for key stakeholders, governments, donors, health systems, and

others involved in health care.

Aristotle's zoological writings with their wealth of detailed investigations on diverse species of animals have fascinated medieval and Renaissance culture. This volume explores how these texts have been read in various traditions (Arabic, Hebrew, Latin), and how they have been incorporated in different

genres (in philosophical and scientific treatises, in florilegia and encyclopedias, in theological symbolism, in moral allegories, and in manuscript illustrations). This multidisciplinary and multilinguistic approach highlights substantial aspects of Aristotle's animals.

This is the story of an airpower-dominated campaign, one that was deeply flawed in its design yet impressive in its efficiency. This quick-

look study is based upon visits to damaged sites, villages, towns, and cities; discussions with government and military officials; and experience of having evaluated airpower and its effects in Afghanistan, Iraq, and the former Yugoslavia (and previously in Lebanon). Months of follow-up research included exchanges with Israeli, Lebanese, Hezbollah, and US experts. The intent was to develop a timely airpower narrative to enhance professional military education and

planning. About the author: William M. Arkin is an independent military analyst, journalist, and author. He writes the "Early Warning" column for washingtonpost.com (where he previously wrote the "DOT.MIL" column from 1998 to 2003) and is a longtime NBC News military analyst. This volume describes the methods used in the surveillance of drinking

water quality in the light of the special problems of small-community supplies, particularly in developing countries, and outlines the strategies necessary to ensure that surveillance is effective. *APC In Search of Green Life - Environmental Studies - Class 5* National Academies Press
Expanding on the National Research Council's "Guide for the Care and Use of Laboratory Animals," this book deals specifically with mammals in neuroscience and behavioral research

laboratories. It offers flexible guidelines for the care of these animals, and guidance on adapting these guidelines to various situations without hindering the research process. Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research offers a more in-depth treatment of concerns specific to these disciplines than any previous guide on animal care and use. It treats on such important subjects as: The important role that the researcher and

veterinarian play in developing animal protocols. Methods for assessing and ensuring an animal's well-being. General animal-care elements as they apply to neuroscience and behavioral research, and common animal welfare challenges this research can pose. The use of professional judgment and careful interpretation of regulations and guidelines to develop performance standards ensuring animal well-being and high-quality research. Guidelines for

the Care and Use of Mammals in Neuroscience and Behavioral Research treats the development and evaluation of animal-use protocols as a decision-making process, not just a decision. To this end, it presents the most current, in-depth information about the best practices for animal care and use, as they pertain to the intricacies of neuroscience and behavioral research. Scientific American John Wiley & Sons Vols. include the proceedings (some

summarized, some official stenographic reports) of the National Wholesale Druggists' Association (called 18 -1882, Western Wholesale Druggists' Association) and of other similar organizations. *Gardeners' Chronicle* The WHO Regional Office for Europe set up a working group of experts to provide scientific advice to the Member States for the development of future legislation and policy action in the area of assessment and control of night noise exposure. The

working group reviewed available scientific evidence on the health effects of night noise, and derived health-based guideline values. In December 2006, the working group and stakeholders from industry, government and nongovernmental organizations reviewed and reached general agreement on the guideline values and key texts for the final document of the "Night noise guidelines for Europe". Considering the scientific evidence on the

thresholds of night noise exposure indicated by "L_{night,outside}" [L suffix night,outside] as defined in the Environmental Noise Directive (2002/49/EC), an L_{night,outside} of 40 dB should be the target of the night noise guideline (NNG) to protect the public, including the most vulnerable groups such as children, the chronically ill and the elderly. "L_{night,outside}" value of 55 dB is recommended as an interim target for the countries where the NNG cannot be achieved in the

short term for various reasons, and where policy-makers choose to adopt a stepwise approach. These guidelines are applicable to the Member States of the European Region, and may be considered as an extension to, as well as an update of, the previous WHO "Guidelines for community noise" (1999).
